Read these instructions carefully. Only then will you be able to operate your appliance safely and correctly. Retain the instruction manual and installation instructions for future use or for subsequent owners.

This appliance is only intended to be fully fitted in a kitchen. Observe the special installation instructions.

Check the appliance for damage after unpacking it. Do not connect the appliance if it has been damaged in transport.

Only a licensed professional may connect appliances without plugs. Damage caused by incorrect connection is not covered under warranty.

This appliance is intended for domestic use only. The appliance must only be used for the preparation of food and drink. The appliance must be supervised during operation. Only use this appliance indoors.

This appliance is intended for use up to a maximum height of 4000 metres above sea level.

This appliance may be used by children over the age of 8 years old and by persons with reduced physical, sensory or mental capabilities or by persons with a lack of experience or knowledge if they are supervised or are instructed by a person responsible for their safety how to use the appliance safely and have understood the associated hazards.

Children must not play with, on, or around the appliance. Children must not clean the appliance or carry out general maintenance unless they are at least 15 years old and are being supervised.

Keep children below the age of 8 years old at a safe distance from the appliance and power cable.

Always slide accessories into the cooking compartment the right way round.

→ "Accessories" on page 10
Important safety information

General information

⚠️ Warning – Risk of fire!
- Combustible items stored in the cooking compartment may catch fire. Never store combustible items in the cooking compartment. Never open the appliance door if there is smoke inside. Switch off the appliance and unplug it from the mains or switch off the circuit breaker in the fuse box.
- Loose food remnants, fat and meat juices may catch fire. Before using the appliance, remove the worst of the food remnants from the cooking compartment, heating elements and accessories.
- A draught is created when the appliance door is opened. Greaseproof paper may come into contact with the heating element and catch fire. Do not place greaseproof paper loosely over accessories during preheating. Always weight down the greaseproof paper with a dish or a baking tin. Only cover the surface required with greaseproof paper. Greaseproof paper must not protrude over the accessories.

⚠️ Warning – Risk of burns!
- The appliance becomes very hot. Never touch the interior surfaces of the cooking compartment or the heating elements. Always allow the appliance to cool down. Keep children at a safe distance.
- Accessories and ovenware become very hot. Always use oven gloves to remove accessories or ovenware from the cooking compartment.
- Alcoholic vapours may catch fire in the hot cooking compartment. Never prepare food containing large quantities of drinks with a high alcohol content. Only use small quantities of drinks with a high alcohol content. Open the appliance door with care.

⚠️ Warning – Risk of scalding!
- The accessible parts become hot during operation. Never touch the hot parts. Keep children at a safe distance.
- When you open the appliance door, hot steam can escape. Steam may not be visible, depending on its temperature. When opening, do not stand too close to the appliance. Open the appliance door carefully. Keep children away.
- Water in a hot cooking compartment may create hot steam. Never pour water into the hot cooking compartment.

⚠️ Warning – Risk of injury!
- Scratched glass in the appliance door may develop into a crack. Do not use a glass scraper, sharp or abrasive cleaning aids or detergents.
- The hinges on the appliance door move when opening and closing the door, and you may be trapped. Keep your hands away from the hinges.

⚠️ Warning – Risk of electric shock!
- Incorrect repairs are dangerous. Repairs may only be carried out and damaged power cables replaced by one of our trained after-sales technicians. If the appliance is defective, unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.
- The cable insulation on electrical appliances may melt when touching hot parts of the appliance. Never bring electrical appliance cables into contact with hot parts of the appliance.
- Do not use any high-pressure cleaners or steam cleaners, which can result in an electric shock.
- A defective appliance may cause electric shock. Never switch on a defective appliance. Unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.

⚠️ Warning – Hazard due to magnetism!
Permanent magnets are used in the control panel or in the control elements. They may affect electronic implants, e.g. heart pacemakers or insulin pumps. Wearers of electronic implants must stay at least 10 cm away from the control panel.
Halogen lamp

⚠️ Warning – Risk of burns!
The bulbs in the cooking compartment become very hot. There is still a risk of burning your skin for some time after they have been switched off. Do not touch the glass cover. Avoid contact with your skin when cleaning.

⚠️ Warning – Risk of electric shock!
When replacing the cooking compartment bulb, the bulb socket contacts are live. Before replacing the bulb, unplug the appliance from the mains or switch off the circuit breaker in the fuse box.

Cleaning function

⚠️ Warning – Risk of fire!
- Loose food remnants, fat and meat juices may catch fire when the cleaning function is in progress. Before you start the cleaning function, always remove the worst of the food residues and remnants from the cooking compartment. Do not use the cleaning function for cleaning accessories.
- The appliance will become very hot on the outside during the cleaning function. Never hang combustible objects, e.g. tea towels, on the door handle. Do not place anything against the front of the appliance. Keep children away from the appliance.

⚠️ Warning – Risk of serious harm to health!
The appliance becomes very hot when the cleaning function is in progress. The non-stick coating on baking trays and tins is destroyed and noxious gases are released. Never clean non-stick baking trays or baking tins using the cleaning function. In general, you must not use the cleaning function for cleaning accessories.

⚠️ Warning – Risk of burns!
- The cooking compartment becomes extremely hot during the cleaning function. Never open the appliance door. Allow the appliance to cool down. Keep children away from the appliance.
- ⚠️ The appliance will become very hot on the outside during the cleaning function. Never touch the appliance door. Allow the appliance to cool down. Keep children away from the appliance.

Causes of damage

General information

Caution!
- Accessories, foil, greaseproof paper or ovenware on the cooking compartment floor: do not place accessories on the cooking compartment floor. Do not cover the cooking compartment floor with any sort of foil or greaseproof paper. Do not place ovenware on the cooking compartment floor if a temperature of over 50 °C has been set. This will cause heat to accumulate. The baking and roasting times will no longer be correct and the enamel will be damaged.
- Aluminium foil: Aluminium foil in the cooking compartment must not come into contact with the door glass. This could cause permanent discolouration of the door glass.
- Water in a hot cooking compartment: do not pour water into the cooking compartment when it is hot. This will cause steam. The temperature change can cause damage to the enamel.
- Moisture in the cooking compartment: Over an extended period of time, moisture in the cooking compartment may lead to corrosion. Allow the cooking compartment to dry after use. Do not keep moist food in the closed cooking compartment for extended periods of time. Do not store food in the cooking compartment.
- Cooling with the appliance door open: Following operation at high temperatures, only allow the cooking compartment to cool down with the door closed. Do not trap anything in the appliance door. Even if the door is only left open a crack, the front of nearby furniture may become damaged over time. Only leave the cooking compartment to dry with the door open if a lot of moisture was produced whilst the oven was operating.
- Fruit juice: when baking particularly juicy fruit pies, do not pack the baking tray too generously. Fruit juice dripping from the baking tray leaves stains that cannot be removed. If possible, use the deeper universal pan.
- Extremely dirty seal: If the seal is very dirty, the appliance door will not be closed properly when the appliance is in operation. This may result in damage to the front panels of adjacent kitchen units. If the seal is damaged, you can order a new one from our after-sales service.
- Appliance door as a seat, shelf or worktop: Do not sit on the appliance door, or place or hang anything on it. Do not place any cookware or accessories on the appliance door.
- Inserting accessories: depending on the appliance model, accessories can scratch the door panel when closing the appliance door. Always insert the accessories into the cooking compartment as far as they will go.
- Carrying the appliance: do not carry or hold the appliance by the door handle. The door handle cannot support the weight of the appliance and could break.
Environmental protection

Your new appliance is particularly energy-efficient. Here you can find tips on how to save even more energy when using the appliance, and how to dispose of your appliance properly.

Saving energy

- Only preheat the appliance if this is specified in the recipe or in the tables in the operating instructions.
- Leave frozen food to defrost before placing it in the cooking compartment.
- Use baking tins that are dark-coloured, painted black or have an enamel coating. These absorb the heat particularly well.
- Remove any unnecessary accessories from the cooking compartment.
- Open the appliance door as infrequently as possible when the appliance is in use.
- It is best to bake several cakes one after the other. The cooking compartment stays warm. This reduces the baking time for the second cake. You can place two cake tins next to each other in the cooking compartment.
- For longer cooking times, you can switch the appliance off 10 minutes before the end of the cooking time and use the residual heat to finish cooking.

Environmentally-friendly disposal

Dispose of packaging in an environmentally-friendly manner.

This appliance is labelled in accordance with European Directive 2012/19/EU concerning used electrical and electronic appliances (waste electrical and electronic equipment - WEEE). The guideline determines the framework for the return and recycling of used appliances as applicable throughout the EU.
Getting to know your appliance

In this chapter, we will explain the indicators and controls. You will also find out about the various functions of your appliance.

Note: Depending on the appliance model, individual details and colours may differ.

Control panel

You can set your appliance’s various functions on the control panel. Below, you will see an overview of the control panel and the layout of the controls.

Buttons and display

The buttons are touch keys with sensors underneath. Simply touch a symbol to select the function it represents. The display shows symbols for active functions and the time-setting options.

Function selector

Use the function selector to set the heating function or other functions. You can turn the function selector clockwise or anti-clockwise from the "Off" position.

Temperature selector

Use the temperature selector to set the temperature for the heating function or select the setting for other functions. You can also turn the temperature selector clockwise and anti-clockwise.

Note: On some appliances, the control knobs can be pushed in. To push the control knob in and engage it or to release it again, turn it to the "Off" position.

Buttons and display

You can use the buttons to set various additional functions on your appliance. You will be able to see the values for these on the display.

<table>
<thead>
<tr>
<th>Button</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time-setting options</td>
<td>To select the timer, cooking time, end time and the time on the clock, touch the button repeatedly.</td>
</tr>
<tr>
<td>Minus</td>
<td>Press to decrease the setting values.</td>
</tr>
<tr>
<td>Plus</td>
<td>Press to increase the setting values.</td>
</tr>
<tr>
<td>Weight</td>
<td>Select a weight in the programmes.</td>
</tr>
<tr>
<td>Childproof lock</td>
<td>Lock and unlock the oven functions on the control panel.</td>
</tr>
</tbody>
</table>

Display panel

On the display panel, you will be able to see the interior temperature, which you can set using the temperature selector.

You will also be able to see the settings for the time-setting options. Touch the button repeatedly to select the various time-setting options. The symbol for the function that is currently selected will be lit.
Getting to know your appliance

Types of heating and functions

Use the function selector to set the types of heating and other functions.

To make sure you always use the right type of heating to cook your food, we have explained the differences and applications below.

<table>
<thead>
<tr>
<th>Heating function</th>
<th>Temperature</th>
<th>Use</th>
</tr>
</thead>
<tbody>
<tr>
<td>3D hot air</td>
<td>50-275 °C</td>
<td>For baking and roasting on one or more levels. The fan distributes the heat from the ring-shaped heating element in the back panel evenly around the cooking compartment.</td>
</tr>
<tr>
<td>Hot air gentle</td>
<td>50-275 °C</td>
<td>This is an energy-saving heating function that allows you to gently cook meat, fish and baked items. The appliance optimally controls the supply of energy to the cooking compartment. The food is cooked in phases using residual heat. This means that it remains more succulent and browns less. Depending on the method of preparation and the type of food, it is possible to save energy. This heating function is used to determine the energy efficiency class.</td>
</tr>
<tr>
<td>Pizza setting</td>
<td>50-275 °C</td>
<td>For cooking pizza and dishes that require a lot of heat from underneath. The bottom heating element and the ring-shaped heating element in the back panel heat the cooking compartment.</td>
</tr>
<tr>
<td>Bottom heating</td>
<td>50-275 °C</td>
<td>For cooking in a bain marie and for baking food for extra time. Heat is emitted from below.</td>
</tr>
<tr>
<td>Full-surface grill</td>
<td>Grill settings: 1 = low, 2 = medium, 3 = high</td>
<td>For grilling flat items, such as steaks or sausages, for making toast, and for browning food. The whole area below the grill element becomes hot.</td>
</tr>
<tr>
<td>Circulated air grilling</td>
<td>50-275 °C</td>
<td>For roasting poultry, whole fish and larger pieces of meat. The grill heating element and the fan switch on and off alternately. The fan circulates the hot air around the food.</td>
</tr>
<tr>
<td>Top/bottom heating</td>
<td>50-275 °C</td>
<td>For traditional baking and roasting on one level. Especially suitable for cakes with moist toppings. Heat is emitted evenly from above and below.</td>
</tr>
</tbody>
</table>

Note: For each heating function, the appliance specifies a default temperature or level. You can accept this value or change it in the appropriate area.

Other functions

Your new oven has yet more functions; see below for a brief description of these.

<table>
<thead>
<tr>
<th>Function</th>
<th>Use</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rapid heat-up</td>
<td>Heats up the cooking compartment quickly without accessories inside it.</td>
</tr>
<tr>
<td>Interior lighting</td>
<td>Switches on the interior lighting; all other functions remain off. This makes it easier to clean the cooking compartment, for example.</td>
</tr>
<tr>
<td>Programmes</td>
<td>For many types of food, the appliance has preprogrammed setting values that you can use. → &quot;Programmes&quot; on page 26</td>
</tr>
<tr>
<td>Wet-cleaning aid</td>
<td>The wet-cleaning aid takes the hard work out of cleaning your cooking compartment. → &quot;Cleaning function&quot; on page 19</td>
</tr>
<tr>
<td>Pyrolytic self-cleaning</td>
<td>The cleaning function cleans the cooking compartment almost by itself. → &quot;Cleaning function&quot; on page 19</td>
</tr>
</tbody>
</table>
Temperature

Use the temperature selector to set the temperature in the cooking compartment. It can also be used to select the grill and cleaning settings, for example. The settings will appear on the display.

Notes
- The temperature can be set in 1 degree increments up to 100 °C, and in 5 degree increments thereafter.
- When cooking at very high temperatures, the appliance lowers the temperature slightly after an extended period.

Temperature indicator

When the appliance is heating, the symbol will be lit on the display. It goes out during pauses in heating.

When you are preheating the appliance, the optimal time to place your food in the cooking compartment is when the symbol first goes out.

Notes
- The temperature indicator only appears for heating functions for which a temperature is set. It does not appear for grill settings, for example.
- Due to thermal inertia, the actual temperature inside the cooking compartment may differ slightly from the temperature that is displayed.

Cooking compartment

Various functions in the cooking compartment make your appliance easier to use. For example, the cooking compartment is well lit and a cooling fan prevents the appliance from overheating.

Opening the appliance door

If you open the appliance door when the appliance is in operation, the appliance will continue to operate as before.

Interior lighting

With most heating functions and other functions, the interior lighting in the cooking compartment will remain lit while the oven is in operation. When the function selector is turned to bring operation to an end, the lighting will go out.

By turning the function selector to the interior lighting setting, you can switch on the lighting without heating the oven. This makes it easier to clean your appliance, for example.

Cooling fan

The cooling fan switches on and off as required. The hot air escapes above the door.

Caution!
Do not cover the ventilation slots. Otherwise, the appliance may overheat.

So that the cooking compartment cools down more quickly after operation, the cooling fan continues to run for a certain period afterwards.

Accessories

Your appliance is accompanied by a range of accessories. Here, you can find an overview of the accessories included and information on how to use them correctly.

Control accessories

The accessories supplied may differ depending on the appliance model.

Wire rack
- For ovenware, cake tins and ovenproof dishes.
- For roasts, grilled items and frozen meals.

Universal pan
- For moist cakes, pastries, frozen meals and large roasts.
- It can be used to catch dripping fat when you are grilling directly on the wire rack.

Baking tray
- For tray bakes and small baked products.

Only use original accessories. They are specially adapted for your appliance.

You can buy accessories from the after-sales service, from specialist retailers or online.

Note: The accessories may deform when they become hot. This does not affect their function. Once they have cooled down again, they regain their original shape.

Inserting accessories

The cooking compartment has five shelf positions. The shelf positions are counted from the bottom up.

In some appliances, the highest shelf position is marked on the cooking compartment with the grill symbol.

Always insert the accessory between the two guide bars for a shelf position.

Accessories can be pulled out approximately halfway without tipping.
Notes
- Make sure that you always insert the accessories into the cooking compartment the right way round.
- Always insert accessories fully into the cooking compartment so that they do not touch the appliance door.
- Take any accessories that you will not be using out of the cooking compartment.

Locking function
The accessories can be pulled out approximately halfway until they lock in place. The locking function prevents the accessories from tilting when they are pulled out. The accessories must be inserted into the cooking compartment correctly for the tilt protection to work properly.
When inserting the wire rack, ensure that lug a is at the rear and is facing downwards. The open side must be facing the appliance door and the outer rail must be facing downwards.

Combining accessories
You can insert the wire rack and the universal pan at the same time to catch drops of liquid.
When inserting the wire rack, ensure that both spacers a are at the rear edge. When inserting the universal pan, the wire rack is on top of the upper guide rod of the shelf position.
Example in the picture: Universal pan

Optional accessories
You can buy optional accessories from the after-sales service, from specialist retailers or online. *You will find a comprehensive range of products for your appliance in our brochures and online.
Both availability and whether it is possible to order online differ between countries. Please see your sales brochures for more details.
Note: Not all optional accessories are suitable for every appliance. When purchasing, please always quote the exact identification number (E-no.) of your appliance.
→ *Customer service* on page 26

</tbody>
</table>
Before using for the first time

Before you can use your new appliance, you must make some settings. You must also clean the cooking compartment and accessories.

Initial use

The time will appear on the display once the appliance is connected to the power supply. Set the current time.

Setting the time on the clock

The function selector must be set to "Off".

The time is set to 12:00 by default.

1. Use the ~ or { button to set the time.
2. Touch the r button to confirm.

Once you have set the time, it will be shown on the display panel.

Cleaning the cooking compartment and accessories

Before using the appliance to prepare food for the first time, you must clean the cooking compartment and accessories.

Cleaning the cooking compartment

To eliminate the new-appliance smell, heat up the cooking compartment without anything in it and with the oven door closed.

Make sure that there is no packaging (e.g. polystyrene pellets) left in the cooking compartment. Before heating up the appliance, wipe the smooth surfaces in the cooking compartment with a soft, damp cloth. Make sure that the kitchen is well ventilated while the oven is heating up.

Apply the settings indicated. You can find out how to set the heating function and the temperature in the next section. → "Operating the appliance" on page 12

<table>
<thead>
<tr>
<th>Settings</th>
<th>Top/bottom heating</th>
<th>240 °C</th>
<th>1 hour</th>
</tr>
</thead>
</table>

Turn off the oven once the specified time has elapsed. Once the cooking compartment has cooled down, clean the smooth surfaces with soapy water and a dish cloth.

Cleaning the accessories

Clean the accessories thoroughly using soapy water and a dish cloth or soft brush.

Operating the appliance

You have already learnt about the controls and how they work. Now we will explain how to apply settings on your appliance.

Switching the appliance on and off

Use the function selector to switch the appliance on or off. Turning the function selector to any position other than the "Off" position switches on the appliance. To switch off the appliance, always turn the function selector to the "Off" position.

Setting the heating function and temperature

It is very easy to apply the settings you require to your appliance using the function and temperature selector. In the heating function table, you will find the optimal heating functions for all kinds of food.

Example in the picture: Top/bottom heating at 190 °C.

1. Use the function selector to set the heating function.

2. Use the temperature selector to set the temperature or grill setting.

The oven will start heating after a few seconds.

To switch off the oven, set the function selector to the "Off" position (zero).

Note: The cooking time and the end time can also be set on the appliance. → "Time-setting options" on page 13

Changing

The heating function and temperature can be changed at any time using the relevant selector.

If you change the heating function, the temperature will be changed to the corresponding default value.
### Rapid heating

With Rapid heating, you can shorten the heat-up time. Then, for best results, use:

- 3D hot air
- Top/bottom heating

Only use rapid heat-up when a temperature of over 100 °C has been selected.

To achieve an even cooking result, do not place your food into the cooking compartment until rapid heat-up is complete.

1. Set the function selector to 3D.
2. Use the temperature selector to set the temperature. The oven will start heating after a few seconds.

Once rapid heat-up is complete, an audible signal will sound. Place your food into the cooking compartment and set the heating function and temperature.

### Time-setting options

Your appliance has different time-setting options.

<table>
<thead>
<tr>
<th>Time-setting option</th>
<th>Use</th>
</tr>
</thead>
<tbody>
<tr>
<td>🕝 Cooking time</td>
<td>Once the cooking time you set has elapsed, the oven will automatically switch itself off.</td>
</tr>
<tr>
<td>🕝 End time</td>
<td>Select a cooking time and the end time you require. The oven will start up automatically so that it finishes cooking at the required time.</td>
</tr>
<tr>
<td>🕗 Timer</td>
<td>The timer functions like an egg timer. It runs independently of the oven when it is heating and does not affect the oven.</td>
</tr>
<tr>
<td>🕗 Clock</td>
<td>If no function has been selected, the time of day will appear on the oven's display panel.</td>
</tr>
</tbody>
</table>

To navigate to the duration, select a heating function and touch the button. Once you have set the duration, you can set the end time. The timer can be set at any time.

An audible signal will sound once the duration or timer duration has elapsed. To end the audible signal early, touch the button.

**Note:** You can change the duration of the audible signal in the basic settings.

### Setting the cooking time

You can set the cooking time for your food on the oven. This prevents the food from accidentally being cooked for too long, and means that you do not have to stop what you are doing to switch off the oven.

Before you can set the cooking time, you will need to make sure that there is no time set on the timer.

The maximum time that can be set is 23 hours 59 minutes. The cooking time can be set in 1-minute increments up to 1 hour, and in 5-minute increments thereafter.

The cooking time will start at a different default value depending on which button you touch first: 10 minutes with the button and 30 minutes with the button.

Example in the diagram: Cooking time of 45 minutes.

1. Set the heating function and temperature or grill setting.
2. Touch the button twice.
   - and the symbol will appear on the display panel.
3. Use the ~ or } button to set the cooking time.

The oven will start heating after a few seconds. The temperature you have selected will appear on the display panel.

The time has elapsed
An audible signal will sound. The oven will stop heating. \[ \text{HH}:\text{MM} \] will appear on the display panel.

Once the audible signal has stopped, you can touch the } button and set a new cooking time.

When your food is ready, switch off the oven. To do this, turn the function selector to the "Off" position.

Changing and cancelling
You can change the cooking time at any time; to do this, touch the ~ button and use the ~ or } button to change the cooking time. After a few seconds, the change will be applied.

To cancel, touch the ~ button and set the cooking time to \[ \text{HH}:\text{MM} \]. The oven will continue to heat without a set cooking time.

Checking time-setting options
If multiple time-setting options have been set, the corresponding symbols will be lit on the display panel. The symbol for which a time is currently being displayed will be lit.

To check the values for the different time-setting options, touch the ~ button repeatedly until the symbol you require appears.

Setting the end time
You can delay the time at which cooking is due to finish. You can, for example, put your food in the oven in the morning and set the cooking time so that it is ready at lunchtime.

Notes
- Make sure that food is not left in the oven for too long as it may spoil.
- Set the end time while the oven is still cold.
- Do not set an end time once the appliance is already in operation, as this may affect the cooking result.

The end of the cooking time can be delayed by up to 23 hours 59 minutes.

Example in the picture: The time is 10.30 a.m., a cooking time of 45 minutes has been set and you want the food to be ready at 12.30 p.m.

1. Set the heating function and temperature or grill setting.
2. Touch the ~ button twice and use the ~ or } button to set the duration.
3. Touch the ~ button. \[ \text{HH}:\text{MM} \] and the \( \rightarrow \) symbol will appear on the display panel.

4. Use the ~ or } button to set a later end time.

After a few seconds, the oven will apply the settings. The end time will appear on the display panel. Once the oven is in operation, the temperature you have set will be displayed.

The time has elapsed
An audible signal will sound. The oven will stop heating. \[ \text{HH}:\text{MM} \] will appear on the display panel.

Once the audible signal has stopped, you can touch the ~ button and set a new cooking time.

When your food is ready, switch off the oven. To do this, turn the function selector to the "Off" position.

Changing and cancelling
You can use the ~ or } button to change the end time. After a few seconds, the change will be applied. The end time cannot be changed once the cooking time has already started to count down, as this may affect the cooking result.

To cancel, use the ~ button to reset the end time to the current time of day plus the cooking time. The appliance will start to heat and the cooking time will start to count down.
Checking time-setting options
If multiple time-setting options have been set, the corresponding symbols will be lit on the display panel. The symbol for which a time is currently being displayed will be lit.
To check the values for the different time-setting options, touch the button repeatedly until the symbol you require appears.

Setting the timer
You can use the timer whether the oven is switched on or off. However, it is not possible to set a duration or end time.
The maximum time that can be set is 23 hours 59 minutes. Up to 10 minutes, the timer duration can be set in 30-second increments. Above 10 minutes, the time increments become larger the longer the time you wish to set.
The timer duration will start at a different default value depending on which button you touch first:
5 minutes with the button and 10 minutes with the button.
1. Touch the button until the symbol lights up.
2. Use the or button to set the timer duration.
After a few seconds, the duration on the timer will start to elapse.
Tip: To use the timer for the oven, enter the required cooking time. The oven will switch off automatically at the end of this cooking time.

The timer duration has elapsed
An audible signal will sound. will appear on the display panel.
Press any button to switch off the timer.

Changing and cancelling
You can use the or button to change the timer duration at any time. After a few seconds, the change will be applied.
To cancel, use the button to set the timer to 00:00. The timer will switch itself off.

Checking time-setting options
If multiple time-setting options have been set, the corresponding symbols will be lit on the display panel. The symbol for which a time is currently being displayed will be lit.
To check the values for the different time-setting options, touch the button repeatedly until the symbol you require appears.

Setting the clock
Once the appliance has been connected to the mains or following a power failure, the clock will flash on the display panel. Set the clock.
The function selector must be set to the "Off" position.
1. Touch the button twice. The time will stop flashing.
2. Use the or button to set the clock. After a few seconds, the time you have set the clock to will be displayed.

Note: You can go to the basic settings to specify whether or not the time should be shown on the display panel. → "Basic settings"

Changing the time on the clock
You can alter the clock if you need to, e.g. from summer to winter time.
To do this, with the oven switched off, touch the button repeatedly until the clock lights up, and then use the or button to set the time.
Childproof lock

Your appliance is equipped with a childproof lock so that children cannot switch it on accidentally or change any settings.

Notes
- You can go to the basic settings to specify whether you want the option to set the childproof lock. → "Basic settings" on page 16
- If a hob is connected, it will not be affected by the childproof lock on the oven.

Activating and deactivating

To activate the childproof lock, the function selector must be set to "Off".

Touch and hold the button for approx. 4 seconds.
The corresponding symbol will light up on the display panel. The childproof lock is now active.

Note: If a timer duration has been set, this will continue to count down. While the childproof lock is active, the timer duration cannot be changed.

To deactivate, touch and hold the button again for 4 seconds until the symbol goes out on the display panel.

Locking the oven door

You can change the basic settings so that the oven door also locks. → "Basic settings" on page 16

If the oven has been switched off, the appliance door will lock immediately if you activate the childproof lock.

Basic settings

There are various settings available to you in order to help use your appliance effectively and simply. You can change these settings as required.

List of basic settings

Depending on the features of your appliance, not all basic settings will be available.

* Factory setting (factory settings may vary depending on the appliance model)
** Not available for all appliance types.
Cleaning

Changing the basic settings

The function selector must be set to the "Off" position.

1. Touch and hold the button for approx. 4 seconds. The first basic setting will appear on the display panel, e.g. ™.
2. Use the or button to change the setting if necessary.
3. Touch the button to confirm. The next basic setting will appear on the display panel.
4. Touch the button repeatedly to call up all the basic settings. To change these settings, touch the or button.
5. Finally, touch and hold the button again for approx. 4 seconds to confirm that you want to use the settings you have selected.

This applies all the basic settings.

You can change the basic settings again at any time.

Note: Your changes to the basic settings will be retained even after a power failure.

Cleaning

With good care and cleaning, your appliance will retain its appearance and remain fully functioning for a long time to come. We will explain here how you should correctly care for and clean your appliance.

Suitable cleaning agents

To ensure that the different surfaces are not damaged by using the wrong cleaning agent, observe the information in the table. Depending on the appliance model, not all of the areas listed may be on/in your appliance.

Caution!
Risk of surface damage

Do not use:
- Harsh or abrasive cleaning agents,
- Cleaning agents with a high alcohol content,
- Hard scouring pads or cleaning sponges,
- High-pressure cleaners or steam cleaners,
- Special cleaners for cleaning the appliance while it is hot.

Wash new sponge cloths thoroughly before use.

Tip: Highly recommended cleaning and care products can be purchased through the after-sales service. Observe the respective manufacturer's instructions.

⚠️ Warning – Risk of burns!

The appliance becomes very hot. Never touch the interior surfaces of the cooking compartment or the heating elements. Always allow the appliance to cool down. Keep children at a safe distance.

<table>

</tbody>
</table>
### Notes
- Slight differences in colour on the front of the appliance are caused by the use of different materials, such as glass, plastic and metal.
- Shadows on the door panels, which look like streaks, are caused by reflections made by the interior lighting.
- Enamel is baked on at very high temperatures. This can cause some slight colour variation. This is normal and does not affect operation.
- The edges of thin trays cannot be completely enamelled. As a result, these edges can be rough. This does not impair the anti-corrosion protection.

### Keeping the appliance clean
Always keep the appliance clean and remove dirt immediately so that stubborn deposits of dirt do not build up.

**Warning – Risk of fire!**
Loose food remnants, fat and meat juices may catch fire. Before using the appliance, remove the worst of the food remnants from the cooking compartment, heating elements and accessories.

### Tips
- Clean the cooking compartment after each use. This will ensure that dirt cannot be baked on.
- Always remove flecks of limescale, grease, starch and albumin (e.g. egg white) immediately.
- Use the universal pan for baking very moist cakes.
- Use suitable ovenware for roasting, e.g. a roasting dish.

</tbody>
</table>
Cleaning function

The appliance has a "Self-cleaning" function and a wet-cleaning assistant. The cooking compartment can be cleaned effortlessly using the "Self-cleaning" function, and the cleaning assistant takes the hard work out of cleaning your cooking compartment every day.

Self-cleaning

The cooking compartment can be cleaned effortlessly using the "Self-cleaning" function. The cooking compartment is heated up to a very high temperature. Food remnants from roasting, grilling and baking will burn.

You can choose from three cleaning cycles.

<table>
<thead>
<tr>
<th>Cycle</th>
<th>Cleaning performance</th>
<th>Length of cycle</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Gentle</td>
<td>Approx. 1 hour and 15 minutes</td>
</tr>
<tr>
<td>2</td>
<td>Medium</td>
<td>Approx. 1 hour and 30 minutes</td>
</tr>
<tr>
<td>3</td>
<td>Intensive</td>
<td>Approx. 2 hours</td>
</tr>
</tbody>
</table>

The dirtier the cooking compartment and the longer the dirt has been there, the more powerful the cleaning cycle should be. It is sufficient to clean the cooking compartment every two to three months. You can clean it more frequently if necessary. Cleaning requires approx. 2.5-4.8 kilowatt hours.

Notes

- For safety reasons, the appliance door locks automatically once a certain temperature is reached. You will not be able to open it again until the lock symbol on the display has gone out.
- The interior lighting will not come on while the appliance is being cleaned.

Warning

Risk of burns!

- The cooking compartment becomes extremely hot during the cleaning function. Never open the appliance door. Allow the appliance to cool down. Keep children away from the appliance.
- The appliance will become very hot on the outside during the cleaning function. Never hang combustible objects, e.g. tea towels, on the door handle. Do not place anything against the front of the appliance. Keep children away from the appliance.

Before running the cleaning function

Make sure that the cooking compartment is empty. Remove any accessories, cookware or shelf rails from the cooking compartment. Please see the relevant section for information on how to remove the rails.

Clean the appliance door and along the edges of the cooking compartment in the area around the seal. Do not scrub or remove the seal.

Setting the cleaning function

Make sure you follow all the preparation instructions before setting the cleaning function.

The length of time each cleaning cycle runs for has been preset and cannot be changed.

1. Use the function selector to select the function. will be shown on the display panel.
2. Use the temperature selector to set the cleaning setting. Your chosen setting will be shown on the display panel.

The cleaning function will start after a few seconds. The programme will count down on the display panel.

Ventilate the kitchen while the self-cleaning function is running.

The appliance door will lock shortly after the function starts running. The symbol will appear on the display panel.

An audible signal will sound once the self-cleaning cycle has finished. will appear on the display panel. Switch the appliance off by turning the function selector to the "Off" position.

You will not be able to open the appliance door again until the cooking compartment has cooled down sufficiently and the lock symbol on the display has gone out.

Setting a later end time

You can delay the end until later. Before starting, touch and hold the button until the end time symbol is highlighted on the display panel. Use the selector to set a later end time.

The appliance will switch to standby after it is started.

Changing and cancelling

The power of the cleaning cycle cannot be changed once it has started.

The end time can be changed while the appliance is on standby.

If you would like to cancel the cleaning function, switch the appliance off by turning the function selector to the "Off" position.

The appliance door will remain locked until the cooking compartment has cooled down sufficiently and the lock symbol on the display has gone out.
After running the cleaning function

Allow the cooking compartment to cool down. Use a damp cloth to wipe off the ash that has been left behind in the cooking compartment and around the appliance door.

Hook the rails back in.

Note: Very bad soiling may cause white deposits to remain on the enamel surfaces. This is residue from the food and is harmless. It does not affect performance. You can remove these residues using lemon juice if required.

Wet-cleaning assistant

The wet-cleaning assistant takes the hard work out of cleaning your cooking compartment. Dirt is presoaked by vaporising the soapy water, making it easier to remove this dirt afterwards.

⚠️ Warning – Risk of scalding!
Water in a hot cooking compartment may create hot steam. Never pour water into the hot cooking compartment.

Setting the cleaning assistant

Note: The wet-cleaning assistant can only be used in the cooking compartment when the cooking compartment is cold. Allow the cooking compartment to completely cool down.

1. Remove any accessories from the cooking compartment.
2. Mix 0.4 litres of water (not distilled water) with a drop of washing-up liquid and pour into the middle of the cooking compartment floor (fig. 1).
3. Close the appliance door.
4. Use the function selector to select the function. The cooking time will appear on the display panel. The cleaning assistant will start after a few seconds. The programme will count down on the display panel.

Notes
- The length of time each cleaning cycle runs for has been preset and cannot be changed.
- The end time cannot be delayed.

♦ will flash on the display panel if the cooking compartment has not yet cooled down completely. Switch off the oven. Wait until the cooking compartment has cooled down and switch the cleaning assistant back on.

An audible signal will sound once the cleaning assistant has finished. 00:00 will appear on the display panel. Switch the appliance off by turning the function selector to the "Off" position.

Subsequent cleaning

The remaining water in the cooking compartment must be removed promptly. Do not leave the remaining water in the cooking compartment for a long time (e.g. overnight). The oven must not be operated while the cooking compartment is still wet or damp.

1. Open the appliance door and remove the remaining water with an absorbent sponge cloth (fig. 2).
2. Clean the smooth surfaces in the cooking compartment with a dish cloth or a soft brush. Remove stubborn food remnants using a stainless steel scouring pad.
3. Remove limescale deposits with a cloth soaked in vinegar. Then wipe with clean water and rub dry with a soft cloth (including under the door seal).
4. Leave the appliance door ajar in the stop position (approx. 30°) for approx. 1 hour to allow the enamel surfaces in the cooking compartment to dry thoroughly. Alternatively, you can also run the rapid drying function for the cooking compartment.

Running the rapid drying function for the cooking compartment

1. Once the cleaning assistant has finished, open the appliance door as far as the stop position (approx. 30°).
2. Set 3D hot air to 50 °C.
3. After 5 minutes, switch off the oven and close the appliance door.

Removing heavy deposits of dirt

You have several options for removing particularly stubborn deposits of dirt.
- Leave the soapy water in place for a while before starting the cleaning assistant.
- Rub soapy water onto the dirty areas of the smooth surfaces before starting the cleaning assistant.
- Run the cleaning assistant function again once the cooking compartment has cooled down.
With good care and cleaning, your appliance will retain its appearance and remain fully functional for a long time to come. This will tell you how to remove the shelves and clean them.

**Detaching and refitting the rails**

**Warning – Risk of burns!**
The rails become very hot. Never touch the hot rails. Always allow the appliance to cool down. Keep children away from the appliance.

**Detaching the rails**

1. Lift the rail slightly at the front a and detach it b (figure 1).
2. Then pull the whole rail towards you and take it out (figure 2).

**Clean the rails with cleaning agent and a sponge. For stubborn deposits of dirt, use a brush.**

**Attaching the rails**
The rails only fit on the right or the left side. For both rails, ensure that the curved rods are at the front.

1. First, insert the rail in the middle of the rear socket a, until the rail rests against the cooking compartment wall, and push it back b (figure 1).
2. Then insert the rail into the front socket c, until the rail also rests against the cooking compartment wall here, and press it downwards d (figure 2).
Appliance door

With good care and cleaning, your appliance will retain its appearance and remain fully functional for a long time to come. This will tell you how to remove the appliance door and clean it.

Removing and fitting the appliance door

For cleaning purposes and to remove the door panels, you can detach the appliance door.

The appliance door hinges each have a locking lever. When the locking levers are closed (figure 1), the appliance door is secured in place. It cannot be detached.

When the locking levers are open in order to detach the appliance door (figure 2), the hinges are locked. They cannot snap shut.

![Image 1](image1.png) ![Image 2](image2.png)

**Warning**

**Risk of injury!**

- If the hinges are not locked, they can snap shut with great force. Ensure that the locking levers are always fully closed or, when detaching the appliance door, fully open.
- The hinges on the appliance door move when opening and closing the door, and you may be trapped. Keep your hands away from the hinges.

Removing the appliance door

1. Open the appliance door fully and push it in the direction of the appliance.
2. Fold up the two locking levers on the left and right (figure 1).
3. Close the appliance door as far as it goes a. With both hands, grip the door on the left- and right-hand side and pull it up and out (figure 2).

![Image 3](image3.png)

Fitting the appliance door

Reattach the appliance door in the opposite sequence to removal.

1. When attaching the appliance door, ensure that both hinges are inserted straight into the opening (figure 1).
   Place both hinges at the bottom on the outer panel and use this as a guide. Ensure that the hinges are inserted into the correct opening. You must be able to insert them easily and without resistance. If you can feel any resistance, check that the hinges are inserted into the correct opening.

2. Open the appliance door fully. Fold both locking levers closed again (figure 2).

3. Close the cooking compartment door.

Removing the door cover

The stainless steel inlay in the door cover may become discoloured. To carry out thorough cleaning, you can remove the cover. → “Cleaning” on page 17

1. Open the appliance door slightly.
2. Press on the right and left side of the cover (figure 1).
3. Remove the cover (figure 2).
   Close the appliance door carefully.

![Image 4](image4.png)

**Note:** Clean the stainless steel inlay in the cover with stainless steel cleaner. Clean the rest of the door cover with soapy water and a soft cloth.
4. Open the appliance door again slightly. Put the cover back in place and press on it until it clicks audibly into place (figure 3).

5. Close the appliance door.

Removing and installing the door panels
To facilitate cleaning, you can remove the glass panels from the appliance door.

Removing the door from the appliance
1. Open the appliance door slightly.
2. Press on the right and left side of the cover (figure 1).
3. Remove the cover (figure 2).
4. Loosen and remove the screws on the left and right of the appliance door (figure 3).
5. Before closing the door again, trap a tea towel which has been folded several times in the door (figure 4). Pull out the front panel upwards and lay it on a flat surface with the door handle facing downwards.

6. Push both retainers on the intermediate panel upwards, but do not remove it (figure 5). Hold the panel with one hand. Remove the panel.

Clean the panels with glass cleaner and a soft cloth.

⚠️ Warning
Risk of injury!
- Scratched glass in the appliance door may develop into a crack. Do not use a glass scraper, sharp or abrasive cleaning aids or detergents.
- The hinges on the appliance door move when opening and closing the door, and you may be trapped. Keep your hands away from the hinges.

Fitting the door on the appliance
When fitting the intermediate panel, make sure that the arrow is in the top right of the panel and that it aligns with the arrow on the metal panel.

1. Insert the intermediate panel at the bottom into the retainer and push it in firmly at the top (figure 1).
2. Push both retainers downwards (figure 2).
3. Insert the front panel at the bottom into the retainers (figure 3).
4. Close the front panel until both upper hooks are opposite the opening (figure 4).
5. Press the front panel at the bottom until it clicks audibly into place (figure 5).

6. Open the appliance door again slightly and remove the tea towel.

7. Screw both screws back in on the left and right.

8. Put the cover back in place and press on it until it clicks audibly into place (figure 6).

9. Close the appliance door.

**Caution!**
Do not use the cooking compartment again until the panels have been correctly fitted.

---

### Troubleshooting

If a fault occurs, there is often a simple explanation. Before calling the after-sales service, please refer to the fault table and attempt to correct the fault yourself.

#### Rectifying faults yourself

You can often easily rectify technical faults with the appliance yourself.

If a dish does not turn out exactly as you wanted, you can find useful cooking tips and instructions at the end of this instruction manual. → “Tested for you in our cooking studio” on page 29

<table>
<thead>
<tr>

</tbody>
</table>
Trouble shooting

Warning – Risk of electric shock!
Incorrect repairs are dangerous. Repairs may only be carried out and damaged power cables replaced by one of our trained after-sales technicians. If the appliance is defective, unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.

Fault messages on the display panel
If a fault message (begins with "E") appears on the display panel, e.g. E0502, touch the button. This will reset the fault message. If necessary, reset the time.
If the fault was a one-off, you can continue to use the appliance as normal. If the fault message appears again, notify our after-sales service and quote the exact fault message and the E no. of your appliance.

→ "Customer service" on page 26

Maximum operating time
If you do not change the settings on your appliance for several hours, the appliance will stop heating automatically. This prevents unintentional continuous operation.
When the maximum operating time is reached depends on the various different settings that have been configured on the appliance.
Maximum operating time reached
appears on the display.
Turn the function selector to the "Off" position. You can configure new settings if required.

Tip: To prevent the appliance from switching off when you do not want it to, e.g. with an extremely long cooking time, you should always set a cooking time. The appliance will heat up until the set cooking time has elapsed.

Replacing the bulb in the top of the cooking compartment
If the cooking compartment light bulb fails, it must be replaced. Heat-resistant, 25 watt, 230 V halogen bulbs are available from the after-sales service or specialist retailers.
When handling the halogen bulb, use a dry cloth. This will increase the service life of the bulb. Only use these bulbs.

Warning – Risk of electric shock!
When replacing the cooking compartment bulb, the bulb socket contacts are live. Before replacing the bulb, unplug the appliance from the mains or switch off the circuit breaker in the fuse box.

Warning – Risk of burns!
The appliance becomes very hot. Never touch the interior surfaces of the cooking compartment or the heating elements. Always allow the appliance to cool down. Keep children at a safe distance.
1. Place a tea towel in the cold cooking compartment to prevent damage.
2. Turn the glass cover anti-clockwise to remove it (figure 1).
3. Pull out the bulb – do not turn it (figure 2).
   Insert the new bulb, making sure that the pins are in the correct position. Push the bulb in firmly.
4. Screw the glass cover back on. Depending on the appliance model, the glass cover may have a sealing ring. If the glass cover has a sealing ring, put it back in place before screwing the cover back on.
5. Remove the tea towel and switch on the circuit breaker.
Customer service

Our after-sales service is there for you if your appliance needs to be repaired. We will always find an appropriate solution, also in order to avoid after-sales personnel having to make unnecessary visits.

E number and FD number

When calling us, please quote the full product number (E no.) and the production number (FD no.) so that we can provide you with the correct advice. The rating plate bearing these numbers can be found when you open the appliance door.

If your appliance operates with steam, you will find the rating plate on the right-hand side behind the panel.

To save time, you can make a note of the numbers for your appliance and the telephone number of the after-sales service in the space below in case you need them.

<table>
<thead>
<tr>
<th>E no.</th>
<th>FD no.</th>
</tr>
</thead>
</table>

After-sales service

Please note that a visit from an after-sales service engineer is not free of charge in the event that the appliance has been misused, even during the warranty period.

After-sales contact details for all countries can be found in the attached after-sales service directory.

Programmes

You can prepare food very easily using the various programmes. Simply select a programme and the appliance will apply the optimal settings for you.

To achieve good results, the cooking compartment must not be too hot. Allow the cooking compartment to cool before starting the programme.

Cookware

Follow the instructions provided by the cookware manufacturer.

Suitable cookware:
Use cookware that is heat-resistant up to 300 °C.

Glass or glass ceramic cookware is best. The grill can heat through the glass lid and the roast will become nice and crispy on the outside.

Roasting dishes made from stainless steel are not ideal. Their shiny surface reflects a high proportion of the radiated heat. The food will brown less readily and the meat will be less well done. If you are using a stainless steel roasting dish, remove the lid once the programme has come to an end. Grill the meat at grill setting 3 for an additional 8 to 10 minutes.

The food will brown more quickly from below if you use a roasting dish made of enamelled steel, cast iron or die-cast aluminium. Add a little more liquid.

Tip: If the gravy is too light or too dark, add less or more liquid next time.

Unsuitable cookware:
Cookware made of bright, shiny aluminium, unglazed clay or plastic, and cookware with plastic handles, is not suitable.

Size of the cookware:
The roast should cover around two thirds of the cookware base. This will ensure that you get good meat juices.

The distance between the meat and the lid should be at least 3 cm. The meat may expand as it roasts.

Preparing food

Use fresh food, ideally at fridge temperature.

Tip: Very lean meat will remain more succulent if it is covered with rashers of bacon.

Weigh your food. You need the weight in order to set the programme. Always round up to the nearest weight.

Place the cookware onto the wire rack. Always place the ovenware into the cooking compartment without preheating it.
Programmes

When the roast is ready, it can be left to rest for an additional 10 minutes in the cooking compartment with the appliance switched off and the door closed. This allows for better distribution of the meat juices. The weight can be set to between 0.5 kg and 2.5 kg.

Note: The weight range is deliberately limited. For very large items of food, there is often no suitable cookware available, meaning that the cooking result would not be what was expected.

</table>
Setting a programme

The oven chooses the optimal heating function and the time and temperature setting. All you need to do is set the weight.

The weight that you set must be within a specific weight range.

1. Use the function selector to select the \( PG \) function. \( PG \) will be shown on the display panel.
2. Use the \( \text{ } \) or \( \text{ } \) button to select the programme you require.
3. To confirm that you want to use the selected programme, touch the \( \text{ } \) button.
   The weight appears by default on the display panel.
4. Use the \( \text{ } \) or \( \text{ } \) button to enter the weight of the food.
   Once the weight setting has been applied, the calculated cooking time will appear on the display.
   You can use the \( \text{ } \) button to return to the programme if you need to.

The programme will start after a few seconds. The duration you have set will count down on the display panel.

Once the programme has ended, an audible signal will sound. A cooking time of \( \text{ } \) \( \text{ } \) will be shown on the display panel.

If the food has been cooked to your liking, switch the oven off by turning the function selector to the "Off" position.

Programme duration

Your appliance will automatically calculate how long the programme you have set is going to take. The programme duration will be displayed once you have set the weight for your chosen programme.

You cannot change the duration of a programme.

Adding extra cooking time

Once the programme and the audible signal stop, you can use the \( \text{ } \) selector to set a new cooking time. The oven will resume heating using the programme settings.

Note: This function allows you to add extra cooking time as many times as you want.

If the food has been cooked to your liking, switch the oven off by turning the function selector to the "Off" position.

Setting a later end time

Some programmes can be set to end at a later time. Before starting, touch and hold the \( \text{ } \) button until the end time symbol is highlighted on the display panel.

Use the \( \text{ } \) button to set a later end time.

The appliance will switch to standby after it is started.

Changing and cancelling

Once the appliance is started, the programme number and the weight cannot be changed.

The end time can be changed while the appliance is on standby.

If you would like to cancel the programme, switch the appliance off by turning the function selector to the "Off" position.
Tested for you in our cooking studio

Here, you can find a selection of dishes and the ideal settings for them. We will show you which type of heating and temperature are best suited to your dish. You will get information on suitable cooking accessories and the height at which they should be placed in the oven. You will also get tips about cookware and preparation methods.

Note: A lot of steam can build up in the cooking compartment when cooking food. Your appliance is very energy-efficient and radiates very little heat to its surroundings during operation. Due to the high difference in temperature between the appliance interior and the external parts of the appliance, condensation may build up on the door, control panel or adjacent kitchen cabinet panels. This is a normal physical phenomenon. Condensation can be reduced by preheating the oven or opening the door carefully.

General information

Recommended setting values

The table lists the optimal heating type for various types of food. The temperature and cooking time are dependent on the quantity of food and the recipe. Settings ranges are indicated for this reason. Try using the lower values to start with. A lower temperature will result in more even browning. You can use a higher setting next time if necessary.

Note: Cooking times cannot be reduced by using higher temperatures. The food would only be cooked on the outside, but would not be fully baked in the middle.

The setting values apply to food that is placed into a cold cooking compartment. By doing so, you can make energy savings of up to 20 per cent. If you preheat the oven, you can reduce the indicated baking times by several minutes.

Preheating is necessary for selected food, and this is indicated in the table. Do not place your food or accessories into the cooking compartment until it has finished preheating.

If you wish to follow one of your own recipes when baking, you should use the setting values listed for similar food in the table as reference. Additional information can be found in the baking tips listed after the settings tables.

Remove unused accessories from the cooking compartment. This will ensure that you achieve the best possible cooking results and energy savings of up to 20 per cent.

Gentle hot air heating function

If you wish to use the gentle hot air heating function, make sure that the cooking compartment is cold and empty before you place your food inside. Always keep the appliance door closed when cooking. Only cook on one level when using this function.

Baking on one level

When baking on one level, use the following shelf positions:

- Tall baked goods or tin on wire rack: Level 2
- Flat baked goods or goods in a baking tray: Level 3

Baking on two or more levels

Use hot air. Items that are placed in the oven on baking trays or in baking tins/dishes at the same time will not necessarily be ready at the same time.

Baking on two levels:
- Universal pan: Position 3
- Baking tray: Position 1
- Baking tins/dishes on the wire rack
  - First wire rack: Position 3
  - Second wire rack: Position 1

Baking on three levels:
- Baking tray: Position 5
- Universal pan: Position 3
- Baking tray: Position 1

You can cut energy use by up to 45% by preparing items at the same time. Position baking tins/dishes either next to one another or offset on different shelves so that they are not directly one above the other in the cooking compartment.

Accessories

Only use original accessories supplied with your appliance. These have been tailored to the cooking compartment and the operating modes of your appliance.

Ensure that you always use suitable accessories and that they are placed in the oven the right way around. → "Accessories" on page 10

Greaseproof paper

Only use greaseproof paper that is suitable for the selected temperature. Always cut greaseproof paper to size.
Cakes and pastries
Your appliance offers you a range of heating types for the preparation of cakes and small baked items. You can find the ideal settings for many dishes in the settings tables. Also refer to the notes in the section on allowing dough to rise.

Baking tins
For optimal cooking results, we recommend using dark-coloured metal baking tins. Tinplate baking tins, ceramic dishes and glass dishes extend baking time and mean that the baked item will not brown evenly.

If you are using silicone moulds, follow the manufacturer's instructions and recipes. Silicone moulds are often smaller than normal baking tins. Quantity and recipe specifications may vary.

* Preheat

Frozen products
Do not use frozen products that are heavily frosted. Remove any ice on the food.
Some frozen products may be unevenly pre-baked. Uneven browning may remain even after baking.

Bread and rolls
Caution!
Never pour water into the hot cooking compartment or place cookware containing water onto the bottom of the cooking compartment. The change in temperature can cause damage to the enamel.

Some food turns out better if it is baked in several stages. These dishes are indicated in the table.

The setting values for bread dough apply to both dough placed on a baking tray and dough placed in a loaf tin.

**Baking tips**

You want to find out whether the baked item is completely cooked in the middle. Push a cocktail stick into the highest point on the baked item. If the cocktail stick comes out clean with no dough residue, the baked item is ready.

The baked item collapses. Next time, use less liquid. Alternatively, set the temperature 10 °C lower and extend the baking time. Adhere to the specified ingredients and preparation instructions in the recipe.

The baked item has risen in the middle but is lower around the edge. Only grease the base of the springform cake tin. After baking, loosen the baked item carefully with a knife.

The fruit juice overflows. Next time, use the universal pan.

Small baked items stick to one another during baking. There should be a gap of approx. 2 cm around each item. This gives enough space for the baked items to expand well and brown on all sides.

The baked item is too dry. Set the temperature 10 °C higher and shorten the baking time.

The baked item is too light in colour overall. If the shelf position and the accessories are correct, then you should increase the temperature if necessary or extend the baking time.

The baked item is too light on top, and too dark underneath. Bake the cake one level higher in the oven the next time.

The baked item is too dark on top, and too light underneath. Bake the cake one level lower in the oven the next time. Select a lower temperature and extend the baking time.

The baked item is too dark in a tin or loaf tin. Place the baking tray in the middle of the accessory, not directly against the back wall.

The baked item is too dark in colour overall. Select a lower temperature next time and extend the baking time if necessary.

The baked item is unevenly browned. Select a slightly lower temperature. Protruding greaseproof paper can affect the air circulation. Always cut greaseproof paper to size. Ensure that the baking tin does not stand directly in front of the openings in the cooking compartment back wall.

When baking small items, you should use similar sizes and thicknesses wherever possible.

You were baking on several levels. The items on the top baking tray are darker than those on the lower baking tray. Always select hot air when baking on several levels. Baked items that are placed into the oven on trays or in baking tins at the same time will not necessarily be ready at the same time.
Bakes and gratins

Your appliance offers you a range of heating types for preparing bakes. You can find the ideal settings for many dishes in the settings tables.

How well cooked a bake is will depend on the size of the cookware and the depth of the bake.

Use wide, shallow cookware for bakes and gratins. In deep, narrow cookware, food requires more time to cook, and the top will be darker.

Always use the indicated shelf positions.

You can prepare dishes on one level using a baking tin/dish or the universal pan.
- Baking tins/dishes on the wire rack: Level 2
- Universal pan: Level 3

By preparing several dishes at the same time, you can make energy savings of up to 45 per cent. Position baking tins/dishes next to one another in the cooking compartment.

### Dish | Accessories/cookware | Shelf position | Heating function | Temperature in °C | Cooking time in mins
---|---|---|---|---|---
Bake, savoury, cooked ingredients | Ovenproof dish | 2 | B | 200-220 | 30-60
Bake, sweet | Ovenproof dish | 2 | B | 170-190 | 40-60
Potato gratin, raw ingredients, 4 cm deep | Ovenproof dish | 2 | 9 | 150-170 | 60-80
Potato gratin, raw ingredients, 4 cm deep, 2 levels | Ovenproof dish | 3+1 | 9 | 150-160 | 65-80

Poultry, meat and fish

Your appliance offers you a range of heating types for preparing poultry, meat and fish. You can find the ideal settings for certain dishes in the settings tables.

Roasting on the wire rack

Roasting on the wire rack is particularly well suited for larger poultry or for multiple pieces at the same time.

Slide the universal pan into the oven at the indicated shelf position with the wire rack attached. Ensure that the wire rack is correctly positioned on the universal pan. → *Accessories* on page 10

Pour up to ½ litres of water into the universal pan, depending on the size and type of the roast. Any dripping liquid is caught. You can make a sauce from these juices. In addition, less smoke is generated, and the cooking compartment stays cleaner.

Roasting in cookware

**Warning – Risk of injury caused by shattering glass!**

Place hot glass cookware on a dry mat after cooking. If the surface is damp or cold, the glass may crack.

**Warning – Risk of scalding!**

Very hot steam may escape when opening the lid after cooking. Lift the lid at the rear, so that the hot steam can escape away from you.

Only use cookware which is suitable for use in an oven. Glass cookware is best. Check whether the cookware fits in the cooking compartment.

Shiny roasting dishes made from stainless steel or aluminium reflect heat like a mirror and are therefore not particularly suitable. The poultry, meat and fish cooks slower and does not brown so well. Use a higher temperature and/or a longer cooking time.

Observe the manufacturer's instructions for your roasting cookware.

Uncovered cookware

To cook poultry, meat and fish, it is best to use a deep roasting tin. Place the tin onto the wire rack. If you do not have any suitable cookware, use the universal pan.
Covered cookware
When cooking with covered cookware, the cooking compartment remains considerably cleaner. Ensure that the lid fits well and closes properly. Place the cookware onto the wire rack.

Poultry, meat and fish can also become crispy in a covered roasting dish. Simply use a roasting dish with a glass lid and set a higher temperature.

Grilling
Keep the appliance door closed when using the grill. Never grill with the appliance door open.

Place the food to be grilled on the wire rack. In addition, slide the universal pan in at least one shelf position lower, with the slanted edge facing the appliance door. Any dripping fat will be caught.

When grilling, try wherever possible to use pieces of food which are of a similar thickness and weight. This will allow them to brown evenly and remain succulent and juicy. Place the food to be grilled directly onto the wire rack.

Use tongs to turn the pieces of food you are grilling. If you pierce the meat with a fork, the juices will run out and it will become dry.

Do not add salt to the meat until it has been grilled. Salt draws water from the meat.

Notes
- The grill element switches itself continuously on and off; this is normal. The grill setting determines how frequently this occurs.
- Smoke may be produced when grilling.

Meat thermometer
Depending on your appliance’s features, you may have a meat thermometer. You can cook accurately using a meat thermometer. Read important notes on using the meat thermometer in the corresponding chapter. There, you can find notes on inserting the meat thermometer, the possible heating types and additional information.

Recommended setting values
The setting values are based on the assumption that unstuffed, chilled, ready-to-roast poultry, meat or fish is placed into a cold cooking compartment.

In the table, you can find specifications for poultry, meat and fish with default values for the weight. If you wish to prepare heavier poultry, meat or fish, always use the lower temperature. If roasting several joints, use the weight of the heaviest piece as a basis for determining the cooking time. The individual pieces should be approximately equal in size.

The larger the poultry, meat or fish is, the lower the cooking temperature and the longer the cooking time.

Turn the poultry, meat and fish after approx. ½ to ⅓ of the indicated time.

Poultry
For duck or goose, pierce the skin on the underside of the wings. This allows the fat to run out.

If using duck breast, score the skin. Do not turn duck breasts.

When you turn poultry, ensure that the breast side or the skin side is underneath at first.

Poultry will turn out particularly crispy and brown if you baste it towards the end of the roasting time with butter, salted water or orange juice.

Meat
Baste lean meat with fat as required or cover it with strips of bacon.

When roasting, add a little liquid if the meat is lean. A covering of approx. ½ cm depth should be applied to the base of any glass cookware.

Score the rind crosswise. If you turn the joint when cooking, ensure that the rind is underneath at first.

When the joint is ready, turn off the oven and allow it to rest for another 10 minutes in the cooking compartment. This allows the meat juices to be better distributed. Wrap the joint in aluminium foil if necessary. The recommended resting time is not included in the cooking time indicated.

It is more convenient to roast and braise meat in cookware. You can take the joint out of the cooking compartment more easily in the cookware, and prepare the sauce in the cookware itself.

The quantity of liquid is dependent on the type of meat, the cookware material and also on whether or not a lid is used. If preparing meat in an enamelled or dark metal roasting dish, it will need a little more liquid than if cooked in glass cookware.

The steam evaporates in the cookware when roasting. Carefully pour in more liquid if required.

The distance between the meat and the lid should be at least 3 cm. The meat may rise.

If necessary, braise the meat first by searing it. Add water, wine, vinegar or a similar liquid to the braising liquid. A covering approx. 1-2 cm deep should be applied to the base of the cookware.

Fish
Fish cooked whole does not have to be turned. Place the whole fish into the cooking compartment in swimming position with the dorsal fin facing upwards. Placing half a potato or a small oven-proof container in the stomach cavity of the fish will provide stability.

You can tell when the fish is cooked because the dorsal fin can be removed easily.

When stewing, add two to three tablespoons of liquid and a little lemon juice or vinegar into the cookware.

**Desserts**

You can make your own soufflés and yogurt using your appliance.

**Soufflés**

You can also prepare soufflés in a water bath in the universal pan. To do so, slide the universal pan in at level 2.

**Yogurt**

Remove accessories and shelves from the cooking compartment. The cooking compartment must be empty.

1. Heat 1 litre of milk (3.5 % fat) to 90 °C on the hob and then cool down to 40 °C. It is sufficient to heat UHT milk to 40 °C.
2. Stir in 150 g (chilled) yogurt.
3. Pour into cups or small jars and cover with cling film.
4. Place the cups or jars onto the cooking compartment floor and set as indicated in the table.
5. After preparation, leave the yogurt to cool in the refrigerator.

* Heat up up to 100 °C with [ ]
**Acrylamide in foodstuffs**

Acrylamide is mainly produced in grain and potato products prepared at high temperatures, such as potato crisps, chips, sliced bread, bread rolls, bread or fine baked goods (biscuits, gingerbread, spiced biscuit).

**Tips for keeping acrylamide to a minimum**

| General | Keep cooking times as short as possible.  
|         | Cook food until it is golden brown, but not too dark.  
|         | Large, thick pieces of food contain less acrylamide.  
| Baking  | With top/bottom heating at max. 200 °C.  
|         | With hot air at max. 180 °C.  
| Biscuits| With top/bottom heating at max. 190 °C.  
|         | With hot air at max. 170 °C.  
|         | Egg or egg yolk reduces the production of acrylamide.  
| Oven chips| Spread out a single layer evenly on the baking tray. Cook approx. 400-600 g at once on a baking tray so that the chips do not dry out and become crunchy.  

**Drying**

You can achieve outstanding drying results with hot air. With this type of preserving, flavours are concentrated as a result of the dehydration.

Only use unblemished, fresh fruit, vegetables and herbs and wash them thoroughly. Line the wire rack with greaseproof paper or parchment paper. Drain the excess water from the fruit and then dry it.

If necessary, cut it into equal chunks or thin slices. Place unpeeled fruit onto the dish with the sliced surfaces facing upwards. Ensure that neither fruit nor mushrooms overlap on the wire rack.

Grate vegetables and then blanch them. Drain the blanched vegetables thoroughly and spread them evenly on the wire rack.

Dry herbs on the stem. Position the herbs evenly and slightly heaped on the wire rack.

Use the following shelf positions for drying:

- 1 wire rack: Position 3
- 2 wire racks: Positions 3 + 1

Turn very juicy fruit and vegetables several times. After drying, remove the dried fruit and vegetables from the paper immediately.

In the table, you will find settings for drying various foodstuffs. The temperature and drying time are dependent on the type, moisture, ripeness and thickness of the food to be dried. The longer you leave the food to be dried, the better it will be preserved. The thinner the slices are, the quicker the drying process will be and the more flavour the dried food will retain. For this reason, the table specifies setting ranges.

If you wish to dry food that is not listed in the table, you should use similar foodstuffs in the table as a reference.

Preserving
You can preserve fruit and vegetables using your appliance.

⚠️ Warning – Risk of injury!
If the food is preserved incorrectly, the preserving jars may burst. Follow the instructions for preserving.

Jars
Only use clean and undamaged preserving jars. Only use heat-resistant, clean and undamaged rubber rings. Check clips and clamps in advance.

For each preserving process, only use preserving jars that are the same size and contain the same food. In the cooking compartment, you can preserve the contents of a maximum of six ½-, 1 or 1½-litre preserving jars at the same time. Do not use jars that are larger or taller than this. The lids could rupture.

Preserving jars must not touch one another in the cooking compartment during the preserving process.

Preparing fruit and vegetables
Only use fruit and vegetables that are in good condition. Wash them thoroughly.

Peel, core and chop fruit and vegetables appropriate to their type and fill the preserving jars with them up to approx. 2 cm below the rim.

Fruit: Fill the preserving jars with the fruit along with a hot, skimmed sugar solution (approx. 400 ml for a 1-litre jar). For one litre of water:
- Approx. 250 g sugar for sweet fruit
- Approx. 500 g sugar for sour fruit

Vegetables: Fill the jars with the vegetables along with hot, boiled water.
Wipe the rims of the jars, as they must be clean. Place a damp rubber ring and a lid on each jar. Seal the jars with the clips. Place the jars into the universal pan so that they do not touch each other. Pour 500 ml hot water (approx. 80 °C) into the universal pan. Use the settings indicated in the table.

Ending the preserving process
Fruit: After a short while, small bubbles will form at short intervals. Switch off the appliance once all preserving jars are bubbling. Remove the jars from the cooking compartment after the indicated residual heating time.

Vegetables: After a short while, small bubbles will form at short intervals. As soon as all preserving jars are bubbling, reduce the temperature to 120 °C and allow the jars to continue to bubble in the closed cooking compartment as indicated in the table. After this time has elapsed, switch off the appliance and make use of the residual heat for several minutes as indicated in the table.

After preserving, remove the jars from the cooking compartment and place them onto a clean cloth. Do not place these hot jars onto a cold or damp surface, as they may crack. Cover the preserving jars to protect them from draughts. Only remove the clamps once the jars are cold.

The indicated times in the settings table are average values for preserving fruit and vegetables. They may be influenced by room temperature, the number of jars, quantity, heat and quality of the jar contents. The specifications are based on 1-litre round jars. Before you switch off the appliance or change the cooking mode, check whether the contents of the jars are bubbling as they should. The bubbling process starts after approx. 30-60 minutes.

Proving dough

Your yeast dough will prove considerably more quickly using this heating function than at room temperature and will not dry out. Do not start the appliance if the cooking compartment is not completely cool.

Always allow yeast dough to prove twice. Use the settings indicated in the settings tables for the first and second proving stages (dough fermentation stage and final fermentation stage).

Dough fermentation

For the dough fermentation stage, pour 200 ml water onto the cooking compartment floor.

Caution!

Risk of surface damage

■ Never pour water into the cooking compartment when the cooking compartment is hot. The temperature change may damage the enamel.
■ Do not use distilled water. Use tap water only.

Place the dough into a heat-resistant bowl and place this onto the wire rack. Use the settings indicated in the table.

Do not open the appliance door during the proving process, otherwise moisture will escape. Do not cover the dough.

Condensation builds up during the proving process, which steams up the door panel. Wipe out the cooking compartment after dough proving. Remove any limescale with a little vinegar and wipe with clean water.

Final fermentation

Place your dough into the oven at the shelf position indicated in the table.

If you want to preheat the oven, the final fermentation stage takes place outside the appliance in a warm place.

The temperature and proving time are dependent on the type and quantity of the ingredients. For this reason, the values indicated in the settings table are intended as a guide only.

* Heat up to 50 °C with □

Defrosting

For defrosting frozen fruit, vegetables and baked items. Poultry, meat and fish should ideally be defrosted in the refrigerator. Not suitable for cream cakes or cream gateaux.

Use the following shelf positions when defrosting:

■ 1 wire rack: Position 2
■ 2 wire racks: Positions 3 + 1

The times indicated in the table are intended as a guide only. They are dependent on the quality, freezing temperature (-18 °C) and composition of the food. Time ranges are indicated. Set the shortest time to begin with, and then extend the time if necessary.

Tip: Food that has been frozen in thinner pieces or in portions defrosts more quickly than food items frozen in a block.

Remove frozen food from its packaging and place it onto the wire rack in suitable cookware.
Redistribute the food or turn it once or twice as it defrosts. Large pieces of food should be turned several times. As the food defrosts, break up any clumps and remove items which have already defrosted from the cooking compartment.

To allow the temperature to equalise, leave the defrosted food to rest for another 10 to 30 minutes in the appliance after switching it off.

Keeping warm

You can keep cooked dishes warm using the top/bottom heating type at 70 °C. This will avoid condensation developing, and means you will not have to wipe out the cooking compartment.

Do not keep cooked dishes warm for longer than two hours. Be aware that some dishes may continue cooking whilst being kept warm. Cover the dishes if necessary.
Test dishes

These tables have been produced for test institutes to facilitate appliance testing.
As per EN 60350-1.

Baking

Items that are placed in the oven on baking trays or in baking tins/dishes at the same time will not necessarily be ready at the same time.

Shelf positions for baking on two levels:
- Universal pan: Position 3
- Baking tray: Position 1
- Baking tins/dishes on the wire rack
  - First wire rack: Position 3
  - Second wire rack: Position 1

Shelf positions for baking on three levels:
- Baking tray: Position 5
- Universal pan: Position 3
- Baking tray: Position 1

Baking with two springform tins:
- On one level (figure 1)
- On two levels (figure 2)

Notes

- The setting values apply to dishes placed into a cold cooking compartment.
- Please note the information in the tables about preheating. The setting values are valid without rapid heating-up.
- For baking, use the lower of the indicated temperatures first.

Grilling

Also slide in the universal pan. The liquid will be caught and the cooking compartment stays cleaner.
