Intended use

This appliance is intended for use in the home and domestic environments.

Use the dishwasher only in the home and only for its designated purpose: for washing domestic dishes.

This appliance is intended for use up to a maximum altitude of 4000 metres above sea level.
Safety instructions

This appliance may be used by children over the age of 8 years old and by persons with reduced physical, sensory or mental capabilities or by persons with a lack of experience or knowledge if they are supervised or are instructed by a person responsible for their safety how to use the appliance safely and have understood the associated hazards.

Children must not play with, on, or around the appliance. Children must not clean the appliance or carry out general maintenance unless they are at least 8 years old and are being supervised. Keep children below the age of 8 years old at a safe distance from the appliance and power cable.

Before you switch ON the appliance

Please read the instructions for use and installation carefully. They contain important information on how to install, use and maintain the appliance. Retain all documents for later use or for the subsequent owner. You can download the instructions for use from our website free of charge. The relevant Internet address can be found overleaf on these instructions for use.

Delivery

1. Check the packaging and dishwasher immediately for damage caused in transit. Do not switch on a damaged appliance, but contact your supplier.
2. Please dispose of the packaging material in an environmentally friendly manner.
3. Do not let children play with packaging and its parts. There is a risk of suffocation from collapsible boxes and film.
Installation

- Following installation, ensure that the back of the dishwasher is not freely accessible (protection against contact due to hot surface).
- Install and connect the appliance according to the installation and assembly instructions.
- Prior to installation, disconnect the dishwasher from the power supply.
- Ensure that the protective conductor system of the domestic supply has been correctly installed.
- The electrical connection conditions must correspond with the specifications on the dishwasher rating plate [30].
- If the power cord of this appliance is damaged, it must be replaced with a particular power cord. To prevent injury, the power cord may be purchased from customer service only.
- If the dishwasher is installed in a high-sided unit, the unit must be secured properly.

- If the dishwasher is installed below or above other domestic appliances, follow the information for installation in combination with a dishwasher in the installation instructions for the particular appliances.
- Also follow the installation instructions for the dishwasher to ensure that all appliances are operated safely.
- If there is no information or if the installation instructions do not include the appropriate information, contact the manufacturer of these appliances to ensure that the dishwasher can be installed above or below these appliances.
- If you cannot obtain any information from the manufacturer, you must not install the dishwasher above or below these appliances.
- If you install a microwave oven above the dishwasher, the microwave oven may be damaged.
Do not install the appliance near heat sources (radiators, heat storage tanks, cookers or other appliances which generate much heat) and install it under a hob only in consideration of the stipulated safety clearances.

Please note that the insulation material of the dishwasher power cord may melt next to heat sources (e.g. heating / hot water installations) or hot appliance parts. Make sure that the power cord of the dishwasher never comes into contact with heat sources or hot appliance parts.

After installing the appliance, ensure that the plug is easily accessible.
(See Electrical connection)

Some models:
The plastic housing on the water connection contains an electric valve, the connecting cables are in the supply hose. Do not cut through this hose, do not immerse the plastic housing in water.

In daily use
Read and observe the safety information and instructions for use on the packaging for cleaning and rinsing agents.

Childproof lock (door lock) *
The description of the childproof lock is at the back in the envelope.
* depending on model
**Childproof lock (button lock)**

You can secure your appliance from being unintentionally the programme terminated (e.g. improper operation by children).

**Activating the button lock:**

1. Start the required programme.
2. Hold down the button \[ B \] for approx. 4 sec. until this \[ \text{CL} \] is indicated on the digital display.

If any button is pressed while the programme is running, this \[ \text{CL} \] is indicated on the digital display. It is not possible to end (Reset) the programme.

**Deactivating the button lock:**

- Hold down the button \[ B \] for approx. 4 sec. until the display \[ \text{CL} \] goes out.

When the programme ends (0:00 on the digital display), the button lock is cancelled. If there is a power failure, the button lock is retained. Whenever a programme is restarted, the button lock must be reactivated.

**Damage**

- The appliance may be repaired and opened up by a technician only. To do this, disconnect the appliance from the power supply. Pull out the mains plug or switch off the fuse. Turn off the tap.
- If the appliance is damaged, especially the fascia (cracks, holes, broken buttons), or the door function is impaired, stop operating the appliance. Pull out mains plug or switch off fuse. Turn off tap, call customer service.

**Disposal**

1. Make redundant appliances unusable to prevent subsequent accidents.
2. Dispose of the appliance in an environmentally friendly manner.
⚠️ **Warning**
**Risk of injury!**
- Knives and other utensils with sharp points must be placed in the cutlery basket with the points downwards or horizontally on the knife shelf*.
- Do not lean or sit on the open door.
- In the case of free-standing appliances, ensure that the baskets are not overloaded.
* depending on model

⚠️ **Warning**
**Risk of explosion!**
Do not add any solvents to the washing chamber. Danger of explosion!

⚠️ **Warning**
**Risk of scalding!**
Open the door carefully when the programme is still running. There is a risk of hot water spraying out of the appliance.

⚠️ **Warning**
**Risks to children!**
- If fitted, use the childproof lock. An exact description can be found in the back of the envelope.
- Do not allow children to play with or operate the appliance.
- Keep children away from detergents and rinse aid. These may cause chemical burns in the mouth, throat and eyes or asphyxiation.
- Keep children away from open dishwasher. The water in the rinsing compartment is not drinking water and could contain detergent residue.
- When opening and closing the door on an eye-level appliance, ensure that children do not become jammed or crushed between the appliance door and the cupboard door below.
- Children could become locked in the appliance (danger of suffocation) or get into another dangerous situation.
Redundant appliances: Pull out the mains plug, sever and dispose of the power cord. Destroy the door lock so that the door can no longer be closed.
Protection of the environment

Both the packaging of new appliances and the old appliances themselves contain valuable raw materials and recyclable materials. Please dispose of the individual parts separated according to type. Please ask your dealer or inquire at your local authority about current means of disposal.

Packaging

All plastic parts of the appliance are identified with internationally standardised abbreviations (e.g. >PS< polystyrene). Therefore, plastic waste can be sorted out when the appliance is being disposed of. Please follow the safety instructions under “Delivery”.

Old appliances

Please follow the safety instructions under “Disposal of your appliance”.

This appliance is labelled in accordance with European Directive 2012/19/EU concerning used electrical and electronic appliances (waste electrical and electronic equipment - WEEE). The guideline determines the framework for the return and recycling of used appliances as applicable throughout the EU.

Getting to know your appliance

Diagrams of the control panel and the interior of the appliance can be found in the envelope at the front. Individual positions are referred to in the text.

Control panel

1. ON/OFF switch

Water softening system/Special salt

To ensure good washing results, the dishwasher requires soft water, i.e. containing low amounts of lime, otherwise white limescale will be deposited on the utensils and inner container.

Tap water above 1.2 mmol/l must be softened. The water is softened with special salt (regeneration salt) in the water softening system of the dishwasher. The setting and therefore the required amount of salt depends on the degree of hardness of your tap water (see table).

Setting

The amount of salt dispensed can be set from H:00 to H:07.

Salt is not required at the set value H:00.

1. Find out about the hardness value of your tap water. Your water utility company will help you with this.
2. Set value can be found in the water hardness table.
3. Close the door.
4. Switch on ON/OFF switch 1.
5. Hold down programme button A and press START button 8 until H:0... is indicated on the digital display.
6. Release both buttons.
   The LED for button A flashes and the digital display 10 displays the factory setting H:04.

To change the setting:
1. Press programme button C. Each time the button is pressed, the set value increases by one level; when the value of H:07 has been reached, the display jumps back to H:00 (off).
2. Press START button 8. The chosen setting has now been stored.

</tbody>
</table>
Using special salt

Always refill with special salt immediately before switching on the appliance. This ensures that overrun special salt solution is immediately washed out and does not corrode the rinsing tank.

1. Open the screw-type cap of the compartment 24.
2. Fill the tank with water (only required when switching on the appliance for the first time).
3. Then add dishwasher salt (not table salt or tablets).

The water is displaced and runs out. As soon as the salt refill indicator 4 on the fascia is lit, top up the salt.

* depending on model

Using detergents with salt component

If combined detergents with a salt component are used, salt can usually be omitted up to a water hardness of 21° dH (37° fH, 26° Clarke, 3.7 mmol/l). If the water hardness is over 21° dH, special salt must be used.

Switching off salt refill indicator/water softening system

If the salt refill indicator 4 is impaired (e.g. when using combined detergents containing salt component), it can be switched off.

Proceed as described under “Adjusting the water softening system” and set the value to H:00.

The water softening system and salt refill indicator are now switched off.

⚠️ Caution

Never fill the salt dispenser with detergent. You will destroy the water softening system.
**Rinse aid**

As soon as the rinse-aid refill indicator is lit on the fascia, there is still a rinse-aid reserve of 1-2 rinsing processes. Refill with rinse aid.

The rinse aid is required for stain-free utensils and clear glasses. Use only rinse aid for domestic dishwashers.

Combined detergents with rinse-aid component may be used up to a water hardness of 21° dH (37° fH, 26° Clarke, 3.7 mmol/l) only. If the water hardness is over 21° dH, rinse aid must be used.

1. Open the dispenser by pressing and lifting the plate on the cover.
2. Carefully pour rinse aid up to the max. mark in the filler opening.
3. Close cover until it clicks shut.
4. To prevent excessive foam formation during the next rinse cycle, remove any rinse aid which has run over with a cloth.

### Setting amount of rinse aid

The amount of rinse aid dispensed can be set from \( r:00 \) to \( r:06 \). This is the factory setting \( r:04 \).

Do not change the amount of rinse aid unless streaks (select lower setting) or water stains (select higher setting) are left on the utensils.

1. Close the door.
2. Switch on ON/OFF switch \( 1 \).
3. Hold down programme button \( A \) and press START button \( 8 \) until \( H:0.... \) is indicated on the digital display.
4. Release both buttons.
   The LED for button \( A \) flashes and the digital display \( 10 \) displays the factory setting \( H:04 \).
5. Press programme button \( A \) until the factory set value \( r:04 \) is indicated on the digital display \( 10 \).

### To change the setting:

1. Press programme button \( C \).
   Each time the button is pressed, the set value increases by one level; when the value of \( r:05 \) has been reached, the display jumps back to \( r:00 \) (off).
2. Press START button \( 8 \).
   The set value is saved.
Switching off rinse aid refill indicator

If the rinse-aid refill indicator is impaired (e.g. when using combined detergents containing rinse aid component), it can be switched off.

Proceed as described under “Setting amount of rinse aid” and set the value to 0.0.

The rinse aid refill indicator is now switched off.

Utensils

Not suitable

- Cutlery and utensils made of wood.
- Delicate decorative glasses, craft and antique utensils. These decors are not dishwasher-proof.
- Plastic parts not resistant to heat.
- Copper and tin utensils.
- Utensils which are soiled with ash, wax, lubricating grease or ink.

Aluminium and silver parts have a tendency to discolor and fade during the wash cycle. Even some types of glass (e.g. crystal glass objects) may turn cloudy after many wash cycles.

Glass and utensil damage

Causes:

- Glass type and glass production process.
- Chemical composition of the detergent.
- Water temperature of the wash programme.

Recommendation:

- Use only glasses and porcelain which the manufacturer designates as dishwasher-proof.
- Use a detergent which protects utensils.
- Take glass and cutlery out of the dishwasher as soon as possible after the programme ends.
**Loading the dishwasher**

1. Remove large food remnants. It is not necessary to prerinse utensils under running water.
2. Place the utensils so that
   - they are secure and cannot tip over.
   - all utensils with their openings face down.
   - parts with curves or indentations are at an angle, thereby allowing water to drain.
   - does not obstruct rotation of the two spray arms [21] and [22].

Very small utensils should not be washed in the machine, as they may fall out of the baskets.

**Note**
The spray arm for the top basket is offset to the side to provide adequate space in the bottom basket for large plates, bowls or pots. If only closed receptacles such as bowls or pots are placed on the right in the bottom basket, tall utensils, e.g. tall glasses, situated on the right in the top basket may not receive adequate water. In this case place only short utensils on the right in the top basket and tall ones on the left.

**Unloading the dishwasher**

To prevent water from dripping off the upper basket onto the utensils in the lower basket, it is recommended to empty the appliance from the bottom up.

Hot utensils are sensitive to shock! Therefore, when the programme ends, leave the utensils to cool down in the dishwasher until they can be handled.

**Note**
When the programme ends, water droplets can still be seen inside the appliance. This does not affect the drying of the utensils.

**Cups and glasses**

Top basket [20]
**Pans**

**Bottom basket**

Heavily soiled utensils (pans) should be placed in the bottom basket. The more powerful spray jet provides a better dishwashing result.

**Tip**

You should always place cutlery unsorted with the points downwards.

**Folding spikes** *

* depending on model

The spikes can be folded down to improve arrangement of pans, bowls and glasses.

**Small accessories holder** *

* depending on model

Light-weight plastic accessories, e.g. cups, lids, etc. can be held securely in the small accessories holder.
**Height of utensils**

If required, the top utensils basket can be taken out in order to create more space in the bottom basket for taller utensils.

**Maximum height of the utensils**

<table>
<thead>
<tr>
<th>Top basket</th>
<th>Bottom basket</th>
</tr>
</thead>
<tbody>
<tr>
<td>14 cm</td>
<td>30 cm</td>
</tr>
</tbody>
</table>

**Detergent**

You can use tablets as well as powder or liquid detergents for dishwashers, but never use washing up liquid. The dosage can be individually adjusted with powder or a liquid detergent according to the degree of soiling. Tablets contain an adequately large amount of active ingredients for all cleaning tasks. Modern, powerful detergents predominantly use a low-alkaline formulation with phosphate and enzymes. Phosphates bond the lime in the water. Enzymes break down starch and remove protein. Phosphate-free detergents are less frequent. These have a slightly weaker lime bonding capacity and require a higher dosage. To remove coloured stains (e.g. tea, tomato sauce), oxygen-based bleaching agents are usually used.

**Note**

To ensure a good washing result, always follow the instructions on the detergent packaging!

If you have further questions, we recommend that you contact the detergent manufacturers’ helpline.

⚠️ **Warning** – Read and observe the safety information and instructions for use on the packaging for cleaning and rinsing agents.
Adding detergent

1. If the detergent dispenser [28] is still closed, press the lock [29] to open the detergent dispenser. Pour detergent into the dry detergent dispenser [28] only (insert tablet flat, not on its edge). Dosage: see manufacturer’s instructions on the packaging. The graduated detergent dispenser [28] helps you add the correct amount of powder or liquid detergent.

2. Close the cover on the detergent dispenser by sliding it up until the lock engages without difficulty.

 Tip
If the utensils are only lightly soiled, slightly less than the indicated amount of detergent is usually adequate.

Suitable detergents and care products can be purchased online via our website or via customer service (see back page).

Combination detergent

Apart from conventional detergents (Solo), a number of products are offered with additional functions. These products contain not only the detergent but also rinse-aid and salt replacement substances (3in1) and, depending on the combination (4in1, 5in1, etc.), additional components such as glass protection or stainless steel cleaner. Combination detergents function only up to a specific degree of hardness (usually 26° Clarke). Over this limit salt and rinse-aid must be added. As soon as combined detergents are used, the rinse programme is adjusted automatically to ensure the best possible rinsing and drying result.

The detergent dispenser opens automatically at the optimum time depending on the programme. The powder or liquid detergent is distributed in the appliance and is dissolved. The tablet falls into the appliance and dissolves.
Notes

- You will obtain optimum rinsing and drying results by using solo detergents and applying salt and rinse aid separately.
- If programmes are short, tablets may not have full cleaning effect due to different dissolving properties and there may even be undissolved detergent residue. It is recommended to use washing powder for these programmes.
- Even if the rinse-aid and/or salt refill indicator is lit, the rinse programme will run correctly with combined detergents.
- If using detergents in a water-soluble protective cover: Take hold of the cover with dry hands only and put the detergent into an absolutely dry detergent dispenser only, otherwise the detergent may stick.
- If you switch from combined detergents to solo detergents, ensure that the water softening system and amount of rinse aid have been set to the correct value.
## Overview of programmes

The max. possible number of programmes is illustrated in this overview. The corresponding programmes and their arrangement can be found on the fascia.

<table>

</tbody>
</table>
Programme selection

You can select a suitable programme according to the type of utensils and degree of soiling.

Information for test institutes

Test institutes receive the information for comparability tests (e.g. according to EN60436).
These are the conditions for conducting the tests, however these are not the results or consumption values.

Request by e-mail to: dishwasher@test-appliances.com
The product number (E no.) and the production number (FD) are required which you can find on the rating plate on the appliance door.

P+ Additional options

* depending on model
Additional options can be set with the buttons 7.

انون Express WashPlus/Speed PerfectPlus (VarioSpeedPlus) *

This function can reduce the running time by approx. 20% to 66% depending on the selected rinse programme. To obtain optimum cleaning and drying results at a reduced running time, water and energy consumption are increased.

انون HygienePlus *

This function increases the temperatures and retains them for an extra long time to obtain a defined disinfection performance. Continuous use of this function increases the hygiene status. This additional option is ideal for cleaning e.g. chopping boards and baby bottles.

انون Intensive zone *

Perfect for a mixed load. You can wash very soiled pots and pans in the lower basket together with normally soiled utensils in the upper basket. The spray pressure in the lower basket is intensified, the rinsing temperature is increased slightly.

انون Extra drying *

An increased temperature during the final rinse and an extended drying phase ensure that even plastic parts dry better. There is a slight increase in the energy consumption.
Operating the appliance

Programme data

The programme data (consumption values) can be found in the summary of instructions. They refer to normal conditions and the water hardness set value $H_4$. Different influencing factors such as e.g. water temperature or line pressure may result in deviations.

Aqua sensor *

* depending on model

The Aqua sensor is an optical measuring device (light barrier) which measures the turbidity of the rinsing water.

The Aqua sensor is used according to the programme. If the Aqua sensor is active, “clean” rinsing water can be transferred to the next rinse bath and water consumption can be reduced by 2–4 litres. If the turbidity is greater, the water is drained and is replaced with fresh water. In the automatic programmes the temperature and running time can also be adjusted to the degree of soiling.

Switching on the appliance

1. Turn on the tap fully.
2. Switch on ON/OFF switch [1].
   The Eco 50° programme display flashes. This programme remains selected if no other programme button [2] is pressed. The expected programme duration flashes on the digital display [10].
3. Press the START button [8].
   The programme starts running.

Note
- for environmentally friendly operation of the dishwasher:
For ecological reasons the Eco 50° programme is preset whenever the appliance starts. This conserves environmental resources and not least saves you money.

The Eco 50° programme is a particularly environmentally friendly programme. According to EU regulation 1016/2010 it is the “Standard programme” which is the most efficient standard cleaning cycle for cleaning normally soiled utensils in terms of the combined energy and water consumption for cleaning these types of utensils.

Programme sequence indicator [9]

- Your dishes are being cleaned.
- Your dishes are being rinsed.
- Your dishes are being dried.
Operating the appliance

Remaining running time display

When the programme is selected, the remaining running time of the programme is indicated on the digital display [10]. The running time is determined during the programme by the water temperature, the number of utensils as well as the degree of soiling and may vary (depending on the selected programme).

Timer programming *

* depending on model
You can delay the start of the programme in 1-hour steps up to 24 hours.
1. Close the door.
2. Switch on ON/OFF switch [1].
4. Press [6] + or – button until the displayed time corresponds with your requirements.
5. Press START button [8], timer programming is activated.
6. To delete timer programming, press the [6] + or – button until [10] h:00 is indicated on the digital display. You can change your programme selection at any time until the programme starts.

End of programme

The programme has ended when the value 0:00 is indicated on the numerical display [10].

Switching off automatically after the end of the programme *

* depending on model
To save energy, the dishwasher is switched off 1 minute after the programme ends (factory setting).
Automatic disconnection can be adjusted from P:00 to P:02.
P:00 Appliance does not switch off automatically
P:01 Off after 1 min
P:02 Off after 120 min
1. Close the door.
2. Switch on ON/OFF switch [1].
3. Hold down programme button [A] and press START button [8] until h:0... is indicated on the digital display.
5. Press programme button [A] until the factory set value P:01 is indicated on the digital display [10].

To change the setting:
1. Press programme button [C]. Each time the button is pressed, the set value increases by one level; when the value of P:02 has been reached, the display jumps back to P:00 (off).
2. Press START button [8]. The set value is saved.
Switching off the appliance

Short time after the end of the programme:
1. Switch off ON/OFF switch [1].
2. Turn off the tap (not applicable if Aqua-Stop fitted).
3. Remove the utensils when they have cooled down.

Note
When the programme ends, leave the appliance to cool down a while before opening it. This will prevent steam from escaping and causing long-term damage to your built-in furniture.

Interrupting the programme

1. Switch off ON/OFF switch [1]. The LEDs go out. The programme is saved.
   If the door was opened on an appliance which has a warm water connection or is heated, first leave the door ajar for several minutes and then close. Otherwise, expansion (pressure) may cause the appliance door to spring open or water to run out of the appliance.
2. To continue the programme, switch on the ON/OFF switch [1] again.

Terminating the programme (Reset)

1. Press START button [8] for approx. 3 sec.
   The numerical display [10] indicates 0:0 l.
2. The programme sequence lasts approx. 1 min. On the digital display [10] is indicated 0:00.
3. Switch off ON/OFF switch [1].

Changing the programme

When the START button [8] has been pressed, the programme cannot be changed.
The only way a programme can be changed is by Cancel programme (Reset).

Intensive drying

The final rinse uses a higher temperature which improves the drying result. The running time may increase slightly. (Caution if utensils are delicate!)
1. Close the door.
2. Switch on ON/OFF switch [1].
4. Release both buttons.
5. Press programme button [A] until the factory set value 0:00 is indicated on the digital display [10].
To change the setting,
1. Press the button $C$ to switch the Intensive drying on $d:01$ or off $d:00$.
2. Press START button $B$.
The set value is saved.

Cleaning and maintenance

A regular inspection and maintenance of your machine will help to prevent faults. This saves time and prevents problems.

Overall condition of the machine

- Check spray arm for grease and limescale deposits.

If you find such deposits:
- Fill detergent dispenser with detergent. Start the appliance without utensils in the programme with the highest rinsing temperature.

Clean the appliance with detergents/appliance cleaners which are particularly suitable for use with dishwashers.
- To extend the life of your appliance, clean the appliance regularly with a special dishwasher detergent.
- To ensure that the door seal always remains clean and hygienic, regularly clean it with a damp cloth and a little washing-up liquid.
- If the appliance is switched off for a prolonged period, leave the door ajar to prevent the formation of an unpleasant odour.

Never use a steam cleaner to clean your dishwasher. The manufacturer is not liable for any consequential damage. Regularly wipe the front of the appliance and fascia with a damp cloth; water and a little washing up liquid are adequate. Do not use sponges with a rough surface or abrasive detergents, as these could scratch the surfaces.

Stainless steel appliances: To prevent corrosion, avoid using sponge cloths or wash them out thoroughly several times before using for the first time.

⚠️ Warning – Health hazard
Never use other domestic detergents, e.g. containing chlorine!

Special salt and rinse aid

- Check the refill indicators $\text{4}$ and $\text{5}$. If required, refill salt and/or rinse aid.
Filters

The filters keep large foreign objects in the rinsing water away from the pump. These foreign objects may occasionally block the filters.

The filter system consists of a coarse filter, a flat fine filter, and a microfilter.

1. After each washing cycle check the filters for residue.
2. Unscrew filter cylinder as illustrated and take out filter system.
3. Remove any residue and clean filters under running water.
4. Re-install filter system in reverse sequence and ensure that the arrow marks are opposite each other after closing the filter system.

Spray arms

Limescale and contaminants in the rinsing water may block nozzles and bearings on the spray arms.

1. Check outlet nozzles on the spray arms for blockages.
2. Unscrew the upper spray arm.
3. Remove the lower spray arm upwards.
4. Clean spray arms under running water.
5. Re-engage or screw on spray arms.
Fault, what to do?

Experience has shown that you can rectify most faults which occur in daily operation yourself. This ensures that the machine is quickly available to you again. In the following overview you can find possible causes of malfunctions and helpful information for rectifying them.

Note
If the appliance stops during dishwashing or does not start for no obvious reason, first run the Abort programme function (Reset). (See chapter entitled “Operating the appliance”)

⚠️ Warning – Don’t forget: Repairs may be carried out by technicians only. If a component has to be replaced, ensure that only original spare parts are used. Improper repairs or use of non-original spare parts may cause considerable damage and put the user at considerable risk.

Waste water pump

Large food remnants or foreign objects which were not captured by the filters may block the waste water pump. The rinsing water will then be above the filter.

⚠️ Warning – Risk of cuts!
When cleaning the waste water pump, ensure that you do not injure yourself on pieces of broken glass or pointed implements.

In this case:
1. First disconnect the appliance from the power supply.
2. Remove the filters [23].
3. Scoop out water, use a sponge if required.
4. Loosen screws on the pump cover (Torx T 20) and pull off.
5. Check inner compartment and remove any foreign objects.
6. Place pump cover in the original position, press down and screw tight.
7. Install filters.
## Fault, what to do?

### Fault table

<table>
<thead>
<tr>
<th>Fault</th>
<th>Cause</th>
<th>Remedial action</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Tap turned off.</td>
<td>Turn on the tap.</td>
</tr>
<tr>
<td></td>
<td>Tap jammed or calcified.</td>
<td>Turn on the tap. Flow rate must be min. 10 l/min. when water supply is open.</td>
</tr>
<tr>
<td></td>
<td>Filter in the water supply blocked.</td>
<td>Switch off the appliance and pull out the mains plug. Turn off the tap. Unscrew water connection.</td>
</tr>
</tbody>
</table>

#### Fault code: E: 14 is lit.
Water protection system activated.
- Turn off tap.

#### Fault code: E: 15 is lit.
Constant water inflow.
- Call customer service and mention the fault code.

#### Error code: E:22 is lit.
Filters [23] are soiled or blocked.
- Clean filters. (See Cleaning and maintenance)

#### Error code: E:24 is lit.
Waste water hose is blocked or kinked.
- Install hose without kinks, remove any residue.
- Siphon connection still sealed.
- Check connection to siphon and open if required.
- Cover on the waste water pump loose.
- Lock cover correctly. (See Waste water pump)

#### Error code: E:25 is lit.
Waste water pump blocked or cover on the waste water pump is not locked in position.
- Clean pump and lock cover correctly. (See Waste water pump)

#### Error code: E:27 is lit.
Mains voltage too low.
- Not an appliance fault, have the mains voltage and electrical installation checked.

Customer service

If you are unable to rectify the fault, please contact your customer service. We always find a suitable solution, even to avoid unnecessary visits by technicians. Contact information for your nearest customer service can be found on the back of these instructions for use or on the enclosed customer service list. When calling, please state the appliance number (E-Nr. = 1) and the production number (FD = 2) which can be found on the rating plate on the appliance door.

Rely on the competence of the manufacturer. Contact us. You can therefore be sure that the repair is carried out by trained service technicians who carry original spare parts for your domestic appliances.

* depending on model

Installation and connection

The dishwasher must be connected correctly, otherwise it will not function properly. The specifications for the inlet and outlet as well as the electrical connected loads must correspond with the required criteria as specified in the following paragraphs or in the installation instructions.

Install the appliance in the correct sequence:

1. Checking appliance on delivery
2. Installing the appliance
3. Waste water connection
4. Drinking water connection
5. Electrical connection

Product package

If you have any complaints, contact the dealer where you purchased the appliance or our customer service.

- Dishwasher
- Instructions for use
- Installation instructions
- Warranty*
- Installation materials
- Steam guard plate*
- Power cord
* depending on model

Safety instructions

Please follow the safety instructions under “Installation”.

* depending on model
Delivery

Your dishwasher has been checked thoroughly in the factory to ensure that it is in working order. This may cause small water stains. These will disappear after the first wash cycle.

Technical specifications

Weight:
max. 27 kg

Voltage:
220–240 V, 50 Hz or 60 Hz

Connected load:
2.0–2.4 kW

Fuse:
10/16 A (UK 13A)

Power input:
off mode (Po)* 0.10 W
left on mode (Pl)* 0.10 W
*according to regulations (EU) nos. 1016/2010 and 1059/2010

Additional functions and settings may increase the power input.

Water pressure:
at least 0.05 MPa (0.5 bar), maximum 1 MPa (10 bar). At a higher water pressure: connect pressure-reducing valve ahead.

Inlet rate:
minimum 10 litres/minute

Water temperature:
Preferably cold water; if hot water, depending on type of water inlet hose, max. temp. 60 °C (see Drinking water connection).

Installation

The required installation dimensions can be found in the installation instructions. Level the appliance. Ensure that the appliance is situated securely on the floor.

- The appliance can easily be installed in a fitted kitchen between wooden and plastic walls.

Waste-water connection

1. The required work sequence can be found in the installation instructions. If required, fit a siphon with an drainage connection.

2. Connect the waste-water hose to the drainage connection of the siphon with the enclosed parts.

Ensure that the drainage hose is not kinked, crushed or twisted and that there is no cover plate in the drainage to prevent the waste water from flowing out!
Drinking water connection

1. Fasten the drinking water connection to the tap according to the installation instructions using the enclosed parts. Ensure that the drinking water connection is not kinked, crushed or twisted.
2. When replacing the appliance, always use a new water supply hose.

Water pressure:
At least 0.05 MPa (0.5 bar), maximum 1 MPa (10 bar). At a higher water pressure: connect pressure-reducing valve ahead.

Inlet rate:
Minimum 10 litres/minute

Water temperature:
Note printing on the water inlet hose! If models are marked with 25°, the water temperature may be max. 25 °C (cold water).

Warm water connection *

* depending on model
The dishwasher can be connected to cold or hot water up to max. 60 °C. Connection to hot water is recommended if the hot water can be supplied by energetically favourable means and from a suitable installation, e.g. solar heating system with circulation line.
This will save energy and time.
The hot water setting R:0°C allows you to adjust your appliance optimally to operation with hot water.
It is recommended to have a water temperature (temperature of the incoming water) of at least 40 °C and no more than 60 °C.
It is not recommended to connect the appliance to hot water if the water is supplied from an electric boiler.

Setting hot water:
1. Close the door.
2. Switch on ON/OFF switch 1.
3. Hold down programme button A and press START button 8 until H:0°... is indicated on the digital display.
4. Release both buttons.
The LED for button A flashes and the digital display 10 displays the factory setting H:0°C.
5. Press programme button A until the factory set value R:0°C is indicated on the digital display 10.

To change the setting:
1. By pressing the C button, you can switch the hot water setting off R:0°C or on R:0°C.
2. Press START button 8.
The set value is saved.
Electrical connection

- Connect the appliance to an alternating current only, ranging from 220 V to 240 V and 50 Hz or 60 Hz via a correctly installed socket with protective earth conductor. See rating plate for required fusing [30].
- The socket must be near the appliance and freely accessible following installation.
  If the plug is not freely accessible, an allpole disconnector with a contact opening of at least 3 mm must be fitted on the installation side to satisfy the relevant safety instructions.
- The connection may be modified by technicians only.
- A power cord extension may be purchased from customer service only.
- Use only a residual current operated circuit-breaker which features the symbol [.] Only this extension guarantees compliance with the currently valid regulations.
- The appliance features a water damage protection system. Please note the system will not function unless the power supply is connected.

Removing the appliance

Also observe the sequence of worksteps here.
1. Disconnect the appliance from the power supply.
2. Turn off the water supply.
3. Undo the waste water and drinking water connection.
4. Pull out the appliance, carefully pulling the hose behind.
Transportation

Empty the dishwasher and secure loose parts.

**Drain the appliance according to the following steps:**

1. Turn on the tap.
2. Close the door.
3. Switch on ON/OFF switch [1].
4. Select programme with the highest temperature.
   The expected programme duration is indicated on the numerical display [10].
5. Press START button [8].
   Programme sequence starts.
6. After approx. 4 minutes press the START button [8] until 0:01 is indicated on the digital display.
   After approx. 1 min 0:00 is indicated on the digital display.
7. Switch off ON/OFF switch [1].
8. Turn off the tap, disconnect supply hose and drain water.

Transport appliance upright only.
(This prevents residual water from running into the machine control and damaging the programme sequence.)

Protection against frost

If the appliance is in a room where there is a risk of frost (e.g. holiday home), empty the appliance completely (see Transportation).

Subject to changes.
Childproof lock (door lock) *

To open the door, move lever to right and pull door handle.

Always close the appliance door completely when you leave the appliance. This is the only way you can protect your children from potential dangers.
