Intended use

Read these instructions carefully. Please keep the instruction and installation manual, as well as the appliance certificate, in a safe place for later use or for subsequent owners.

Check the appliance after removing it from the packaging. If it has suffered any damage in transport, do not connect the appliance, contact the Technical Assistance Service and provide written notification of the damage caused, otherwise you will lose your right to any type of compensation.

Only a licensed professional may connect appliances without plugs. Damage caused by incorrect connection is not covered under warranty.

This appliance must be installed according to the installation instructions included.

This appliance is intended for private domestic use and the household environment only. The appliance must only be used for the preparation of food and beverages. The cooking process must be supervised. A short cooking process must be supervised without interruption. Only use the appliance in enclosed spaces.

This appliance is intended for use up to a maximum height of 4000 metres above sea level.

Do not use covers. These can cause accidents, for example due to overheating, catching fire or materials shattering.

Only use safety devices or child protection grilles approved by ourselves. Unsuitable safety devices or child protection grilles may result in accidents.

This appliance is not intended for operation with an external clock timer or a remote control.

This appliance may be used by children over the age of 8 years old and by persons with reduced physical, sensory or mental capabilities or by persons with a lack of experience or knowledge if they are supervised or are instructed by a person responsible for their safety how to use the appliance safely and have understood the associated hazards.

Children must not play with, on, or around the appliance. Children must not clean the appliance or carry out general maintenance unless they are at least 15 years old and are being supervised.

Keep children below the age of 8 years old at a safe distance from the appliance and power cable.

If you wear an active implantable medical device (e.g. a pacemaker or defibrillator), check with your doctor that it complies with Council Directive 90/385/EEC of 20th June 1990, DIN EN 45502-2-1 and DIN EN 45502-2-2, and that it has been chosen, implanted and programmed in accordance with VDE-AR-E 2750-10. If these conditions are satisfied, and if, in addition, non-metal cooking utensils and cookware with non-metal handles are used, it is safe to use this induction hob as intended.
**Important safety information**

**Warning – Risk of fire!**
- Hot oil and fat can ignite very quickly. Never leave hot fat or oil unattended. Never use water to put out burning oil or fat. Switch off the hotplate. Extinguish flames carefully using a lid, fire blanket or something similar.
- The hotplates become very hot. Never place combustible items on the hob. Never place objects on the hob.
- The appliance gets hot. Do not keep combustible objects or aerosol cans in drawers directly underneath the hob.
- The hob switches off automatically and can no longer be operated. It may switch on unintentionally at a later point. Switch off the circuit breaker in the fuse box. Contact the after-sales service.
- Do not use hob covers here. They can cause accidents, for example due to overheating, catching fire or materials shattering.

**Warning – Risk of burns!**
- The hotplates and surrounding area (particularly the hob surround, if fitted) become very hot. Never touch the hot surfaces. Keep children at a safe distance.
- The hotplate heats up but the display does not work. Switch off the circuit breaker in the fuse box. Contact the after-sales service.
- Metal objects on the hob quickly become very hot. Never place metal objects (such as knives, forks, spoons and lids) on the hob.
- After each use, always turn off the hob at the main switch. Do not wait until the hob turns off automatically after the pan is removed.

**Warning – Risk of electric shock!**
- Incorrect repairs are dangerous. Repairs may only be carried out and damaged power cables replaced by one of our trained after-sales technicians. If the appliance is defective, unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.
- Do not use any high-pressure cleaners or steam cleaners, which can result in an electric shock.
- A defective appliance may cause electric shock. Never switch on a defective appliance. Unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.
- Cracks or fractures in the glass ceramic may cause electric shocks. Switch off the circuit breaker in the fuse box. Contact the after-sales service.

**Warning – Risk of fault!**
A fan is located on the underside of this hob. If a drawer is located on the underside of the hob, do not store any small or sharp objects, paper or tea towels in it. These may be sucked in and damage the fan or impair the cooling. There must be a clearance of at least 2 cm between the contents of the drawer and the fan entry point.

**Warning – Risk of injury!**
- When cooking in a bain marie, the hob and cooking container could shatter due to overheating. The cooking container in the bain marie must not directly touch the bottom of the water-filled pot. Only use heat-resistant cookware.
- Saucepans may suddenly jump due to liquid between the pan base and the hotplate. Always keep the hotplate and saucepan bases dry.
Causes of damage

Caution!
- Rough pan bases may scratch the hob.
- Avoid leaving empty pots and pans on the hotplate. Doing so may cause damage.
- Do not place hot pans on the control panel, the indicator area, or the hob frame. Doing so may cause damage.
- Hard or pointed objects dropped on the hob may damage it.
- Aluminium foil and plastic containers will melt if placed on the hotplate while it is hot. The use of laminated sheeting is not recommended on the hob.

Overview

You will find the most frequently caused damage in the following table:

<table>
<thead>
<tr>
<th>Damage</th>
<th>Cause</th>
<th>Measure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stains</td>
<td>Boiled over food.</td>
<td>Remove boiled over food immediately with a glass scraper.</td>
</tr>
<tr>
<td></td>
<td>Unsuitable cleaning agent.</td>
<td>Only use cleaning agents that are suitable for this type of hob.</td>
</tr>
<tr>
<td>Scratches</td>
<td>Salt, sugar and sand.</td>
<td>Do not use the hob as a work surface or storage space.</td>
</tr>
<tr>
<td></td>
<td>Cookware with rough bases scratch the hob.</td>
<td>Check the cookware.</td>
</tr>
<tr>
<td>Discolouration</td>
<td>Unsuitable cleaning agent.</td>
<td>Only use cleaning agents that are suitable for this type of hob.</td>
</tr>
<tr>
<td></td>
<td>Pan abrasion.</td>
<td>Lift pots and pans when moving them.</td>
</tr>
<tr>
<td>Chips</td>
<td>Sugar, food with a high sugar content.</td>
<td>Remove boiled over food immediately with a glass scraper.</td>
</tr>
</tbody>
</table>
Environmental protection

In this section, you can find information about saving energy and disposing of the appliance.

Energy-saving advice

- Always use the correct lid for each pan. Cooking without a lid uses a lot more energy. Use a glass lid to provide visibility and avoid having to lift the lid.
- Use pans with flat bases. Bases that are not flat use a lot more energy.
- The diameter of the pan base must match the size of the hotplate. Please note: pan manufacturers usually provide the diameter for the top of the pan, which is usually larger than the diameter of the pan base.
- Use a small pan for small amounts of food. A large pan which is not full uses a lot of energy.
- Use little water when cooking. This saves energy and preserves all the vitamins and minerals in vegetables.
- Select the lowest power level to maintain cooking. If the power level is too high, energy is wasted.

Environmentally-friendly disposal

Dispose of packaging in an environmentally-friendly manner.

This appliance is labelled in accordance with European Directive 2012/19/EU concerning used electrical and electronic appliances (waste electrical and electronic equipment - WEEE). The guideline determines the framework for the return and recycling of used appliances as applicable throughout the EU.

Induction cooking

Advantages of induction cooking

Induction cooking is very different from traditional cooking methods, as heat builds up directly in the item of cookware. This offers numerous advantages:

- Saves time when boiling and frying.
- Saves energy.
- Easier to care for and clean. Spilled food does not burn on as quickly.
- Heat control and safety – the hob increases or decreases the heat supply as soon as the user changes the setting. The induction hotplate stops the heat supply as soon as the cookware is removed from the hotplate, without having to switch it off first.

Cookware

Only use ferromagnetic cookware for induction cooking, such as:

- Cookware made from enamelled steel
- Cookware made from cast iron
- Special induction-compatible cookware made from stainless steel.

To check whether your cookware is suitable for induction cooking, refer to the section on "Cookware check".

To achieve a good cooking result, the ferromagnetic area on the base of the pan should match the size of the hotplate. If a hotplate does not detect an item of cookware, try placing it on another hotplate with a smaller diameter.

Some induction cookware does not have a fully ferromagnetic base:

- If the base of the cookware is only partially ferromagnetic, only the area that is ferromagnetic will heat up. This may mean that heat will not be distributed evenly. The non-ferromagnetic area may not heat up to a sufficient temperature for cooking.
The ferromagnetic area will also be reduced if the material from which the base of the cookware is made contains aluminium, for example. This may mean that the cookware will not become sufficiently hot or even that it will not be detected.

Unsuitable pans
Never use diffuser hobs or pans made from:
- common thin steel
- glass
- earthenware
- copper
- aluminium

Properties of the base of the cookware
The material(s) from which the base of the cookware is made can affect the cooking result. Using pots and pans made from materials that distribute heat evenly through them, such as stainless-steel pans with a three-layer base, saves time and energy.

Use cookware with a flat base; if the base of the cookware is uneven, this may impair the heat supply.

Absence of pan or unsuitable size
If no pan is placed on the selected hotplate, or if it is made of unsuitable material or is not the correct size, the power level displayed on the hotplate indicator will flash. Place a suitable pan on the hotplate to stop the flashing. If this takes more than 90 seconds, the hotplate will switch off automatically.

Empty pans or those with a thin base
Do not heat empty pans, nor use pans with a thin base. The hob is equipped with an internal safety system. However, an empty pan may heat up so quickly that the "automatic switch off" function may not have time to react and the pan may reach very high temperatures. The base of the pan could melt and damage the glass on the hob. In this case, do not touch the pan and switch the hotplate off. If it fails to work after it has cooled down, please contact the Technical Assistance Service.

Pan detection
Each hotplate has a lower limit for pan detection. This depends on the diameter of the ferromagnetic area of the cookware and the material from which its base is made. For this reason, you should always use the hotplate that best matches the diameter of the base of the pan.
Getting to know your appliance

You can find information on the dimensions and power of the hotplates in ➔ Page 2

Note: Depending on the appliance model, individual details and colours may differ.

The control panel

Touch buttons

- Main switch
- Selecting the cooking zone
- Settings area
- Childproof lock
- Locking the control panel for cleaning
- PowerBoost function
- CombiZone function
- Move function
- Time-setting options

Indicators/symbols

- Operating status
- Power levels
- Time-setting options
- Residual heat
- PowerBoost function
- CombiZone function
- Move function
- Setting the cooking time
- Timer
- Time indicator

Touch controls

Touching a symbol activates the associated function.

Notes

- Always keep the control panel clean and dry. Moisture reduces its effectiveness.
- Do not place any cookware near the indicators or sensors. The electronics could overheat.

The hotplates

Cooking zones

- Single cooking zone: Use cookware that is a suitable size
- Combined cooking zone: See the section entitled "CombiZone function" or "Move function"

Only use cookware that is suitable for induction cooking; see the section entitled "Induction cooking"
Residual heat indicator

The hob has a residual heat indicator for each hotplate. This indicates that a hotplate is still hot. Do not touch a hotplate while the residual heat indicator is lit up.

The following indicators are shown depending on the amount of residual heat:

- Display $H$: High temperature
- Display $h$: Low temperature

If you remove the cookware from the hotplate during cooking, the residual heat indicator and the selected heat setting will flash alternately.

When the hotplate is switched off, the residual heat indicator will light up. Even after the hob has been switched off, the residual heat indicator will stay lit for as long as the hotplate is still warm.

Operating the appliance

This chapter explains how to set a hotplate. The table shows heat settings and cooking times for various meals.

Switching the hob on and off

The main switch is used to switch the hob on and off.

To switch on: Touch the $\#$ symbol. An audible signal sounds. The indicator next to the main switch and the hotplate indicators $\langle$ light up. The hob is ready to use.

To switch off: Touch the $\#$ symbol until the indicator goes out. All hotplates are switched off. The residual heat indicator remains lit until the hotplates have cooled down sufficiently.

Notes

- The hob switches off automatically if all hotplates have been switched off for more than 20 seconds.
- The selected settings are stored for four seconds after the hob has been switched off. If you switch it on again during this time, the hob will operate using the previously stored settings.

Setting the hotplate

The desired power level is set in the programming panel.

Power level 1 = minimum power.
Power level 9 = maximum power.

Each power level has an intermediate setting. This is marked with a dot.

Notes

- To protect the fragile parts of your appliance from overheating and electrical overloading, the hob may temporarily reduce the power.
- In order to prevent the appliance from producing excess noise, the hob may temporarily reduce the power.

Selecting a hotplate and heat setting

The hob must be switched on.

1. Touch the $\times$ symbol for the cooking zone you require.
   The $\langle$ symbol lights up below the $\langle$ display.
2. Within the next 10 seconds, slide your finger along the control panel until the required heat setting appears.

The heat setting is set.
Changing the heat setting
Select the hotplate and then set the required heat setting in the control panel.

Switch off the hotplate
Select the hotplate and set it to \( \) in the programming panel. The hotplate turns off and the residual heat indicator appears.

Notes
- If no pan has been placed on the hotplate, the selected power level flashes. After a certain time has elapsed, the hotplate switches off.
- If a pan has been placed on the hotplate before switching on the hob, it will be detected within 20 seconds of pressing the main switch and the hotplate will be selected automatically. Once detected, select the power level within the next 20 seconds or the hotplate will switch off.
  - If more than one pan is placed on the hob, only one will be detected when switching it on.

Chef’s recommendations

Recommendations
- When heating up puree, cream soups and thick sauces, stir occasionally.
- Set heat setting 8 to 9 for preheating.
- When cooking with the lid on, turn the heat setting down as soon as steam escapes between the lid and the cookware. Steam does not need to escape for a good cooking result.
- After cooking, keep the lid on the cookware until you serve the food.
- To cook with the pressure cooker, observe the manufacturer’s instructions.
- Do not cook food for too long, otherwise the nutrients will be lost. The kitchen clock can be used to set the optimum cooking time.
- For a more healthy cooking result, smoking oil should be avoided.
- To brown food, fry small portions in succession.
- Cookware may reach high temperatures while the food is cooking. We recommend that you use oven gloves.
- You can find recommendations for energy-efficient cooking in section "Environmental protection"

Cooking table
The table shows which heat setting is suitable for each type of food. The cooking time may vary depending on the type, weight, thickness and quality of the food.

* Without lid  
** Turn several times  
*** Preheat to heat setting 8 - 8.
CombiZone function

You can use this function to connect the Combi zone and set the same heat setting for both cooking zones. This is especially suitable for cooking with oblong cookware.

Notes regarding cookware

For best results, use cookware that matches the size of the two cooking zones. Place the cookware in the centre of the cooking zones.

If you are using only one piece of cookware on one of the two cooking zones, you can move it to the second cooking zone. If you do this, the heat setting and the selected settings are transferred.

Notes on using cookware

- Only place cookware on one of the hotplates. The function will not be activated if there is cookware on each of the two hotplates.
- The heat setting is less brightly lit on the display for the hotplate on which there is no cookware. It will not be activated until the cookware is moved to this hotplate and is detected.
- If the function has already been activated and a second piece of cookware is placed on the free hotplate, the display lights up less brightly, as before. The hotplate is not active. The hotplate is activated when the first piece of cookware is removed.

Advice on using cookware

To ensure that the cookware is detected and heat is distributed evenly, correctly centre the cookware:

- Only use one piece of cookware that only covers one of the cooking zones.
- Move the cookware from one cooking zone to another:

Move function

You can use this function to connect the Combi zone and select different heat settings for the two cooking zones. Default heat settings:

- Front cooking zone = heat setting 9
- Rear cooking zone = heat setting 1.

The heat settings for each cooking zone can be changed independently of one another.

Notes

- Only place cookware on one of the hotplates. The function will not be activated if there is cookware on each of the two hotplates.
- The heat setting is less brightly lit on the display for the hotplate on which there is no cookware. It will not be activated until the cookware is moved to this hotplate and is detected.
- If the function has already been activated and a second piece of cookware is placed on the free hotplate, the display lights up less brightly, as before. The hotplate is not active. The hotplate is activated when the first piece of cookware is removed.

Advice on using cookware

To ensure that the cookware is detected and heat is distributed evenly, correctly centre the cookware:

- Only use one piece of cookware that only covers one of the cooking zones.

Move the cookware from one cooking zone to another:
Time-setting options

Activation
1. Select one of the two cooking zones assigned to the Move function.
2. Touch the symbol. The indicator lights up. The power levels light up in the displays for the two cooking zones.
   The function has now been activated.

Notes
- The display for the hotplate with the cookware lights up more brightly.
- The indicator lights up on the display for the hotplate that is still selected.

Changing the heat setting
Select one of the two hotplates which are included in the move function and change the heat setting in the settings range.

Note: If the function is deactivated, the heat settings return to the preset values

Deactivating
Touch the symbol.
The function has now been deactivated.

Note: When one of the two hotplates is set to , the function is deactivated within approx. 10 seconds.

Time-setting options

Your hob has two timer functions:
- Programming the cooking time
- Kitchen timer

Programming the cooking time
The hotplate automatically switches off after the time that is set has elapsed.

Setting procedure:
1. Select the hotplate and the required heat setting.
2. Touch the symbol. The indicator for the hob lights up. lights up in the timer display.
3. Within the next 10 seconds, set the required cooking time in the settings range.

After a few seconds, the time begins to elapse.

Note: If the CombiZone or Move function is selected for the combined hotplate, the set time for both hotplates is the same.

Changing or deleting the time
Select the cooking zone and then touch the symbol.
Change the cooking time in the control panel or set to delete the set cooking time.

When the time has elapsed
The cooking zone switches itself off. An audible signal sounds. lights up in the timer display for 10 seconds.
When you touch the symbol, the displays go out and the audible signal ceases.

Notes
- The faster you slide your finger over the control panel, the faster the minutes display counts up or down. Touch the control panel with your finger to stop the display counting.
- If a cooking time has been set for more than one hotplate, the time information for each of the selected hotplates is shown on the timer display.
- You can set a cooking time of up to 99 minutes.
**The kitchen timer**

You can use the kitchen timer to set a time of up to 99 minutes.
This function operates independently from the hotplates and from other settings. This function does not automatically switch off a hotplate.

**Setting procedure**

1. Touch the symbol repeatedly until the indicator lights up. lights up in the timer display.
2. Set the desired time in the control panel.
   - After a few seconds, the time begins to elapse.

**Changing or deleting the time**

Touch the symbol repeatedly until the indicator lights up.
Change the time in the control panel or set to delete the set time.

**When the time has elapsed**

An audible signal sounds, and the indicator flash in the timer display. The displays go out after 10 seconds.
When you touch the symbol, the displays go out and the audible signal ceases.

---

**PowerBoost function**

The PowerBoost function enables you to heat up large quantities of water faster than when using heat setting .
This function can always be activated for a hotplate, provided the other hotplate in the same group is not in use (see illustration). Otherwise, and will flash in the display for the selected hotplate; the heat setting will then be set automatically without activating the function.

**Activate**

1. Select the hotplate.
2. Touch the symbol.
   - The indicator lights up.
   - The function has now been activated.

**Deactivating**

1. Select the hotplate.
2. Touch the symbol.
   - The display goes out and the hotplate switches back to the heat setting.
   - The function is deactivated.

**Note:** In certain circumstances, the PowerBoost function can switch itself off automatically in order to protect the electronic elements inside the hob.
**Childproof lock**

You can use the childproof lock to prevent children from switching on the hob.

**Activating and deactivating the childproof lock**

The hob must be switched off.

To activate: Touch and hold the symbol for approx. 4 seconds. The indicator beside the symbol lights up for 10 seconds. The hob is now locked.

To deactivate: Touch and hold the symbol for approx. 4 seconds. The lock is removed.

**Childproof lock**

With this function, the childproof lock automatically activates when a hob is switched off.

**Switching on and off**

You can find out how to switch the automatic childproof lock on in the "Basic settings" section.

**Wipe protection**

Wiping over the control panel while the hob is switched on may alter the settings. To avoid doing this, you can use the hob's "Lock control panel for cleaning" function.

To switch on: Touch the symbol. An audible signal sounds. The control panel remains locked for 35 seconds. You can now wipe over the surface of the control panel without altering any settings.

To deactivate: The control panel will be unlocked once 35 seconds have elapsed. To release this function early, touch the symbol.

**Notes**

- An audible signal sounds 30 seconds after activation. This indicates that the function is about to finish.
- The cleaning lock does not lock the main switch. The hob can be switched off at any time.

**Automatic safety cut-out**

If a hotplate operates for an extended period and no settings are changed, the automatic safety shut-off is activated.

The hotplate stops heating. and the residual heat indicator or flash alternately in the hotplate display. When you touch any symbol, the display switches off. The hotplate can now be set again.

The point at which the safety shut-off becomes active depends on which heat setting has been set (after 1 to 10 hours).
Basic settings

The appliance has various basic settings. These basic settings can be altered to suit your individual requirements.

*Factory setting
**The hob's maximum power output is shown on the rating plate.
To access the basic settings:
The hob must be off.

1. Switch on the hob.
2. Within the next 10 seconds, press and hold the symbol for approximately 4 seconds.
   The first four displays contain the product information. Touch the control panel to view the individual displays.
3. Pressing the symbol again brings you to the basic settings. and flash alternately in the displays and appears as a default setting.
4. Touch the symbol repeatedly until the required function is displayed.
5. Then select the required setting from the settings area.
6. Touch the symbol for at least 4 seconds.
   The settings have been saved.

Leaving the basic settings
Turn off the hob with the main switch.

Cookware check

This function can be used to check the speed and quality of the cooking process depending on the cookware.

The result is a reference value and depends on the properties of the cookware and the hotplate being used.

1. Correctly position the pot with approximately 200 ml of water, at room temperature, on the most suitable cooking zone for the diameter of the bottom of the pot.
2. Go to the basic settings and select the setting .
3. Press the programming area. flashes in the cooking zone displays.
   The function has now been activated.
After 10 seconds, the cooking result and the speed of the cooking process appear in the visual displays for the cooking zone.

Check the result using the following table:

<table>
<thead>
<tr>
<th>Result</th>
<th>Cookware check</th>
</tr>
</thead>
<tbody>
<tr>
<td>🚗</td>
<td>The cookware is not suitable for the hotplate and will therefore not heat up.*</td>
</tr>
<tr>
<td>🕐</td>
<td>The cookware is taking longer to heat up than expected and the cooking process is not going as well as it should.*</td>
</tr>
<tr>
<td>🕐</td>
<td>The cookware is heating up correctly and the cooking process is going well.</td>
</tr>
</tbody>
</table>

* If there is a smaller hotplate available, test the cookware again on the smaller hotplate.

To reactivate this function, touch the settings range.

Notes
- If the diameter of the hotplate used is much smaller than the diameter of the cookware, only the middle of the cookware can be expected to heat up. This may result in the cooking results not being as good as expected or being less than satisfactory.
- You can find information on this function in the section on “Basic settings”.
- You can find information on the type, size and positioning of the cookware in the section on “Induction cooking”.

Power manager

You can use the power manager to set the total power of the hob.

The hob is preset at the factory. Its maximum performance is specified on the rating plate. You can use the power manager to change the value in accordance with the requirements for the relevant electrical installation.

In order not to exceed this set value, the hob automatically distributes the power available between the cooking zones that are switched on.

As long as the power manager function is activated, the output of a cooking zone may temporarily fall below the nominal value. If a cooking zone is switched on and the power limit is reached, \(-\) appears in the heat setting display for a short time. The appliance automatically regulates and selects the highest possible power level.

For more information about how the total power of the hob is changed, see section → “Basic settings”

Cleaning

Suitable maintenance and cleaning products can be purchased from the after-sales service or in our e-Shop.

Hob

Cleaning

Always clean the hob after cooking. This will prevent food deposits from becoming burned on. Only clean the hob after the residual heat indicator has gone out.

Clean the hob with a damp dish cloth and dry it with a cloth or towel to prevent limescale build-up.

Only use cleaning agents that are suitable for this type of hob. Observe the manufacturer's instructions on the product packaging.

Never use:

- Undiluted washing-up liquid
- Cleaning agents designed for dishwashers
- Abrasive cleaners
- Harsh cleaning agents, such as oven spray and limescale remover
- Scouring pads
- High-pressure cleaners or steam jet cleaners

Stubborn dirt is best removed with a glass scraper, available from retailers. Observe the manufacturer's instructions.

You can obtain a suitable glass scraper from customer services or through our online shop.

Using a special sponge for cleaning glass-ceramic hobs achieves a great cleaning result.

<table>
<thead>
<tr>
<th>Potential marks</th>
<th>Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Limescale and water marks</td>
<td>Clean the hob as soon as it has cooled down. You can use a cleaning agent suitable for glass-ceramic hobs.*</td>
</tr>
<tr>
<td>Sugar, rice starch or plastic</td>
<td>Clean immediately. Use a glass scraper. Cau- tion: Risk of burns.*</td>
</tr>
</tbody>
</table>

* Then clean with a damp dish cloth and dry with a cloth or towel.

Note: Do not use any cleaning agents while the hob is still hot. This may mark the surface. Make sure that any residue left by cleaning agents is removed.

Hob surround

To prevent damage to the hob surround, observe the following instructions:

- Only use warm soapy water
- Wash new dish cloths thoroughly before use.
- Do not use harsh or abrasive cleaning agents.
- Do not use a glass scraper or sharp objects.
Frequently Asked Questions (FAQ)

Using the appliance

Why can’t I switch on the hob and why is the childproof lock symbol lit?
  The childproof lock is activated.
  You can find information on this function in the section on "Childproof lock"

Why are the displays flashing and why can I hear an audible signal?
  Remove any liquid or food remains from the control panel. Remove any objects from the control panel.
  You can find instructions on how to deactivate the audible signal in the section on "Basic settings"

Noises

Why I can hear noises while I’m cooking?
  Noises may be generated while using the hob depending on the base material of the cookware. These noises are a normal part of induction technology. They do not indicate a defect.

Possible noises:

A low humming noise like the one a transformer makes:
  Occurs when cooking at a high heat setting. The noise disappears or becomes quieter when the heat setting is reduced.

Low whistling noise:
  Occurs when the cookware is empty. This noise disappears when water or food is added to the cookware.

Cracking:
  Occurs when using cookware made from different layers of material or when using cookware of different sizes and different materials at the same time. The loudness of the noise can vary depending on the quantity of food being cooked or the cooking method.

High-pitched whistling noises:
  Can occur when two hotplates are used at the highest heat setting at the same time. The whistling noises disappear or become quieter when the heat setting is reduced.

Fan noise:
  The hob is equipped with a fan that switches on automatically at high temperatures. The fan may continue to run even after you have switched off the hob if the temperature detected is still too high.

Cookware

Which types of cookware can be used with an induction hob?
  You can find information on which types of cookware can be used with an induction hob in the section on "Induction cooking"

Why is the hotplate not heating up and why is the heat setting flashing?
  The hotplate on which the cookware is standing is not switched on.
  Check that you have switched on the correct hotplate.

  The cookware is too small for the hotplate that is switched on or it is not suitable for induction cooking.
  Check that the cookware is suitable for induction cooking and that it is placed on the hotplate that best corresponds to its size. You can find information on the type, size and positioning of the cookware in the sections on "Induction cooking", "CombiZone function" and "Move function".

Why is it taking so long for the cookware to heat up or why is it not heating up sufficiently despite being on a high heat setting?
  The cookware is too small for the hotplate that is switched on or it is not suitable for induction cooking.
  Check that the cookware is suitable for induction cooking and that it is placed on the hotplate that best corresponds to its size. You can find information on the type, size and positioning of the cookware in the sections on "Induction cooking", "CombiZone function" and "Move function".
Trouble shooting

Usually, faults are small matters that are easy to eliminate. Please read the information in the table before calling the after-sales service.

</tr>
</tbody>
</table>

Do not place hot pans on the control panel.

Notes
- If ‘E’ appears on the display, press and hold the button for the relevant cooking zone in order to read the fault code.
- If the fault code is not listed in the table, disconnect the hob from the mains power supply and wait 30 seconds before reconnecting it. If this code is displayed again, contact the technical after-sales service and specify which fault code has appeared.
- If a fault occurs, the appliance will not switch to standby mode.

Cleaning

How do I clean the hob?

Using a special glass-ceramic cleaning agent produces the best results. We advise against using harsh or abrasive cleaning agents, dishwater detergent (concentrated) or scouring pads.

You can find more information on cleaning and caring for your hob in the section on "Cleaning"
Customer service

Our after-sales service is there for you if your appliance needs to be repaired. We will always find an appropriate solution, also in order to avoid after-sales personnel having to make unnecessary visits.

E number and FD number

Please quote the E number (product number) and the FD number (production number) of your appliance when contacting the after-sales service.

The rating plate bearing these numbers can be found:
- On the appliance certificate.
- On the lower section of the hob.

The E-number can also be found on the glass surface of the hob. You can check the customer index (KI) and FD number by going to the basic settings. Look up section “Basic settings” for this.

Please note that a visit from an after-sales service engineer is not free of charge in the event of misuse of the appliance, even during the warranty period.

After-sales contact details for all countries can be found in the attached after-sales service directory.
